

St. Francis of Assisi Catholic Church

SAN ANTONIO, TEXAS

LPA provided the master planning and design of six different projects of some 48,000 square feet over a 15-year span for the church campus. The project includes outdoor gathering areas and seating for 1,100 people in the sanctuary. The octagonal design of the sanctuary allows parishioners to encircle the altar and participate in liturgy. Native limestone and local brick with natural materials are used to enhance the design.
