

University of Texas Retama Stadium

SAN ANTONIO, TEXAS

The scope of this project was the renovation a 300-seat auditorium in the University Center to accommodate the frequent scheduling of lectures and movies in this highly used building. The transformation of the space was accomplished by replacing all seating and finishes. Lighting in the walls accentuate the new flanking wall finishes designed to direct attention to the projection wall. Large sliding panels conceal the fixed projection screen to alter the character of the room when it is not being used for movies.
