Course Description

Pre-Calculus will begin with a review of essential algebraic concepts such as exponents, radicals, polynomials, factoring, and complex numbers. The student will then study material related to trigonometric identities, systems of equations and matrices, and graphing everything from linear and quadratic functions to vectors and polar coordinates. Concepts such as absolute value, synthetic division, and radical expressions will be coupled with real applications of trigonometric functions, combinations and probability. As the material is presented through video lectures and illustrations, the student will be given opportunity to practice learned skills and explore topics such as limits, differentiation and integration.

Rationale

Pre-Calculus takes the student beyond the rigors of Geometry and Algebra 2 to new uses of math principles. It is important for students to learn how basic quadratics and functions can produce more complicated mathematical operations and calculations. By exploring uses of sines and cosines, practical applications involving vectors and matrices can be used to make math a tool for solving problems beyond simple four operation calculations.

Prerequisite

Algebra II and Geometry

Measurable Learning Outcomes

A. The student will review basic principles of algebra including exponents, factoring and solving algebraic equations.
B. The student will practice using algebraic principles to graph and solve problems involving points on the coordinate plane.
C. The student will find the solution sets for inverse functions, explore operations with complex numbers, and use exponential models and natural exponential functions.
D. The student will further study properties of logarithms and solve exponential and logarithmic equations using a variety of methods.
E. The student will explore the attributes and equations of conic sections and use proven algebraic principles to solve and graph conic sections.
F. The student will use trigonometric functions to solve problems across the coordinate plane including sines, cosines, tangents, cotangents, secants and cosecants.
G. The student will be introduced to a variety of trig identities and apply them in solving trigonometric problems including sums, differences, double and half angle formulas.

H. The student will explore and use the law of sines and the law of cosines, vectors and complex numbers, and solve systems of linear equations.

I. The student will investigate determinants, inverses of matrices, polar coordinates, and solve problems using principles of arithmetic and geometric sequences.

J. The student will calculate probability using the fundamental counting principle, permutations and combinations.

Course Materials

See LUOA’s Systems Requirements for computer specifications necessary to operate LUOA curriculum. Also view Digital Literacy Requirements for LUOA’s expectation of users’ digital literacy.

This course makes use of third-party digital resources to enhance the learning experience. LUOA staff and faculty have curated these resources. Students can safely access them to complete coursework. Please ensure that internet browser settings, pop-up blockers, and other filtering tools allow for these resources to be accessed. See Technologies and Resources Used in this Course below for a specific list.

- Note: Embedded YouTube videos may be utilized to supplement LUOA curriculum. YouTube videos are the property of the respective content creator, licensed to YouTube for distribution and user access. As a non-profit educational institution, LUOA is able to use YouTube video content under the YouTube Terms of Service. Course Grading Policies

The student’s grades will be determined according to the following grading scale and assignment weights. The final letter grade for the course is determined by a 10-point scale. Assignments are weighted according to a tier system, which can be referenced on the Grades Page in Canvas. Each tier is weighted according to the table below. Items that do not affect the student’s grade are found in Tier 0.
Grading Scale

<table>
<thead>
<tr>
<th>Grade</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>90-100%</td>
</tr>
<tr>
<td>B</td>
<td>80-89%</td>
</tr>
<tr>
<td>C</td>
<td>70-79%</td>
</tr>
<tr>
<td>D</td>
<td>60-69%</td>
</tr>
<tr>
<td>F</td>
<td>0-59%</td>
</tr>
</tbody>
</table>

Assignment Weights

Course Policies

Students are accountable for all information in the Student Handbook. Below are a few policies that have been highlighted from the Student Handbook.

Types of Assessments

To simplify and clearly identify which policies apply to which assessment, each assessment has been categorized into one of four categories: Lesson, Assignment, Quiz, or Test. Each applicable item on the course Modules page has been designated with an identifier chosen from among these categories. Thus, a Quiz on the American Revolution may be designated by the title, “1.2.W Quiz: The American Revolution.” These identifiers were placed on the Modules page to help students understand which Honor Code and Resubmission policies apply to that assessment (see the Honor Code and Resubmission policies on the pages that follow for further details).

- **Lesson:** *Any item on the Modules page designated as a “Lesson”*
  
  These include instructional content and sometimes an assessment of that content. Typically, a Lesson will be the day-to-day work that a student completes.

- **Assignment:** *Any item on the Modules page designated as an “Assignment”*
  
  Typical examples of Assignments include, but are not limited to, papers, book reports, projects, labs, and speeches. Assignments are usually something that the student should do his or her best work on the first time.

- **Quiz:** *Any item on the Modules page designated as a “Quiz”*
  
  This usually takes the form of a traditional assessment where the student will answer questions to demonstrate knowledge of the subject. Quizzes cover a smaller amount of material than Tests.

- **Test:** *Any item on the Modules page designated as a “Test”*
  
  This usually takes the form of a traditional assessment where the student will answer questions to demonstrate knowledge of the subject. Tests cover a larger amount of material than Quizzes.

Resubmission Policy

Students are expected to submit their best work on the first submission for every Lesson, Assignment, Quiz, and Test. However, resubmissions may be permitted in the following circumstances:

- **Lesson:** Students are automatically permitted two attempts on a Lesson. The student may freely resubmit for their first two attempts without the need for teacher approval.
• **Assignment:** Students are intended to do their best work the first time on all Assignments. However, any resubmissions must be completed before the student moves more than one module ahead of that Assignment. For example, a student may resubmit an Assignment from Module 3 while in Module 4 but not an Assignment from Modules 1 or 2. High School students may not resubmit an Assignment without expressed written permission from the teacher in a comment.

• **Quiz:** Students may NOT resubmit for an increased grade.

• **Test:** Students may NOT resubmit for an increased grade.

If a student feels that he or she deserves a resubmission on a Lesson, Assignment, Quiz, or Test due to a technical issue such as a computer malfunction, the student should message his or her teacher to make the request, and that request will need to be approved by a Department Chair.

**Consequences for Violations to the Honor Code**

Every time a student violates the Honor Code, the teacher will submit an Honor Code Incident Report. The Student Support Coordinator will review the incident and allocate the appropriate consequences. Consequences, which are determined by the number of student offenses, are outlined below:

• **Warning:** This ONLY applies to high school Lessons and elementary/middle school Assignments and Lessons. Students should view these actions as learning opportunities.
  - **Lessons:** A zero will be assigned for the question only.
  - **Elementary/Middle School Assignment:** The student must redo his or her work; however, the student may retain his or her original grade.

• 1st Offense:
  - **Lesson, Quiz, or Test:** The student will receive a 0% on the entire assessment.
  - **Assignment:** The student will either:
    - Receive a 0% on the original assignment
    - Complete the Plagiarism Workshop
    - Retry the assignment for a maximum grade of 80%

• 2nd Offense: The student will receive a 0% and be placed on academic probation.

• 3rd Offense: The student will receive a 0% and the Faculty Chair will determine the consequences that should follow, possibly including withdrawal from the course or expulsion from the academy.
Scope and Sequence
Pre-Calculus

Module 1: Exponents, Factoring and Solving Equations
Week 1: Basic Algebra Review
Week 2: Rational Exponents, Radicals and Polynomials
Week 3: Factoring and Rational Expressions
Week 4: Solving Equations and Complex Numbers

Module 2: Circles, Slope and Functions
Week 5: Coordinates, intercepts, and Circles
Week 6: Slope and Equations of Lines
Week 7: Functions and Graphs of Functions
Week 8: Transformations and Combinations of Functions

Module 3: Quadratic, Polynomial and Exponential Functions
Week 9: Inverse and Quadratic Functions
Week 10: Polynomial Functions
Week 11: Real Zeros, Complex Zeros, and the Fundamental Theorem of Algebra Week
Week 12: Exponential Functions

Module 4: Properties of Logarithms and Graphing Rational Functions
Week 13: Logarithmic Functions
Week 14: Properties of Logarithms, Solving Exponential and Logarithmic Equations
Week 15: Exponential & Logarithmic Models
Week 16: Graphing Rational Functions

Module 5: Conic Sections
Week 17: Conic Sections
Week 18: Semester Review and Exam

Module 6: Sines, Cosines and Other Trigonometric Functions
Week 19: Angles and Their Measure and Right Angle Trigonometry
Week 20: Trigonometric Functions in the Coordinate Plane and Unit Circle Trigonometry
Week 21: Graphing Sine and Cosine Functions
Week 22: Graphing Other Trigonometric Functions

Module 7: Trigonometric Identities, Equations and Formulas
Week 23: Inverse Trigonometric Functions and Applications of Trigonometric Functions
Week 24: Fundamental Trigonometric Identities
Week 25: Solving Trigonometric Equations
Week 26: The Sum, Difference, Double-Angle, Half-Angle, and Power-Reducing Formulas

Module 8: Laws of Sines and Cosines, Vectors and Matrices
Week 27: The Law of Sines and the Law of Cosines
Week 28: Vectors and Complex Numbers
Week 29: Solving Systems of Linear Equations
Week 30: Matrices and Systems of Equations

Module 9: Determinants, Analytic Geometry and Sequences
Week 31: Determinants and Inverses of Matrices
Week 32: Analytic Geometry
Week 33: Arithmetic Sequences
Week 34: Geometric Sequences and Mathematical Induction

Module 10: Probability
Week 35: Counting Principles and Probability
Week 36: Semester Review and Exam
