

MAMBU

6.12

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

[\[CORE-771\] - "repaidDate" parameter is incorrectly populated for an installment that is not fully paid](#)

1. Improvements

[CUS-530] - Number Formatting on Webhook Variables

Mambu has added the ability to choose between formatting numbers (amounts) or not, as follows for Webhooks.

In order to support this, the existing value in the "Display" dropdown list was changed from "Numbers" to "Formatted Numbers". The default format is "#,###.##", as currently, a placeholder example is: `FORMAT {LOAN_AMOUNT, numberPattern=#,###.#}`. This is the default for SMS and Email.

Another option was also added: "Unformatted Numbers" that will keep the numbers as raw values, a placeholder example is: `{LOAN_AMOUNT}`. This is the default for Webhooks

In regards to backwards compatibility and updating existing data, Mambu will perform a live migration script for existing placeholders to allow the format functionality without downtime and requiring no action on your side. As such, Mambu will continue sending notifications with old formatting, until the live migration is finished. After the migration is finished, the amounts with `FORMAT` function will be sent as formatted and any new `LOAN_AMOUNT` placeholders added from the UI will be sent as unformatted.

2. Bugs

[DEP-404] - When Reopening a Deposit account, ActivationDate is set in UTC instead of Organization Time

Upon reopening a deposit account, the Activation Date that was saved on the account was in UTC, instead of the Organization time. Mambu has corrected this behaviour and going forward this will be saved in the Organization time.

A further issue will also address the correction for existing accounts, please follow our next Minor Release notes for it.

[DEP-393] - Overdraft Interest Rate changes on Savings Product displays Confirmation Dialog for All or New Accounts

When editing an existing Current Account product a confirmation was thrown asking whether the changes should be applicable on Existing or New Accounts only, however Mambu currently does not support changes over existing accounts. In order not to mislead on the functionality, Mambu has updated the confirmation since the changes will take effect only on new accounts.

[DEP-361] - Monthly fee from Activation is not applied on savings account

In scenarios for an account, which has a Monthly Fee from Activation, when it was created and then a backdated deposit was made in order to activate the account, the fee was not applied on the account. Mambu has corrected this behaviour and the Monthly Fee should be applied.

[CORE-876] - Cannot Apply Accrued Interest via API on Matured Loans

For matured loans, when attempting to apply accrued interest via API, an error was returned, whereas over the UI the interest could be applied successfully. Mambu has corrected this behaviour and this inconsistency should not be applicable anymore.

[CORE-771] - "repaidDate" parameter is incorrectly populated for an installment that is not fully paid

When posting a payment that is that is not covering the full installment amount, the "repaidDate" parameter is populated with the date of the Repayment that paid the Principal and the Interest. This issue was fixed and now the "repaidDate" parameter for the first installment is not populated until the installment is fully paid. Only the lastPaidDate parameter will be updated with the date of the repayment.

Production release date: Wednesday, 1st of August, 2018
