

MAMBU

7.13

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Improvements

[\[CORE-1305\] - Do not consider the accounts with 0 interest rate when trying to apply interest along with a GL Accounts Closure](#)

[\[CUS-173\] - Improve performance on querying notification messages table on CRON](#)

2. Bug Fixes

[\[ADM-554\] - Incorrect behavior for Clients sheet when trying to import using copy-paste](#)

[\[ADM-932\] - An exception is thrown when trying to import an user link CF with an invalid value](#)

[\[ADM-944\] - Exception is thrown when trying to Export a risk report for overdrafts filtered by arrears age for a specific branch](#)

[\[CUS-1216\] - Internal error received when transactionChannelId is used as sorting criteria for search endpoints](#)

[\[DEP-465\] - Should not be possible to make an Authorization Hold Request if Overdraft is expired](#)

1. Improvements

[CORE-1305] - Do not consider the accounts with 0 interest rate when trying to apply interest along with a GL Accounts Closure

When performing GL Accounts Closure the interest is applied on all accounts that don't have it applied on time, right before creating the Closure, in order to have the situation up-to-date. The accounts that require the interest to be applied are determined by using a query. The query creates some performance issues on the accounts that didn't have interest applied. In V7.13, Mambu fixed this issue and the accounts with interest rate equal to 0 will not be considered when trying to apply interest along with GL Accounts Closure.

[CUS-173] - Improve performance on querying notification messages table on CRON

With CUS-173 we added a performance improvement for larger size notifications so cron jobs runtimes have now decreased.

2. Bug Fixes

[ADM-554] - Incorrect behavior for Clients sheet when trying to import using copy-paste

When copy pasting data from a report to another (either after a revert or error correction) the data pasted into the new report was identified as not correct. With ADM-554, data is correctly processed even if it was copy-paste from a previous version of the file.

[ADM-932] - An exception is thrown when trying to import an user link CF with an invalid value

When importing data, if linked custom fields were used, the import would have been successful but the fields would remain empty after import. With this fix, the fields are processed correctly if the values are valid and specific errors are thrown if the values used are invalid.

[ADM-944] - Exception is thrown when trying to Export a risk report for overdrafts filtered by arrears age for a specific branch

When trying to export a risk report for overdrafts filtered by arrears age for a specific branch, an error was thrown in the console log instead of the report being successfully exported. With this fix, the report is now successfully generated.

[CUS-1216] - Internal error received when transactionChannelId is used as sorting criteria for search endpoints

When using API 1.0 search endpoints for savings and loans transactions, an internal error was thrown when using transactionChannelId as sorting criteria as it was not handled by the endpoint. With CUS-1216, we now handle transaction channel ID as sorting criteria and responses are sent as expected.

[DEP-465] - Should not be possible to make an Authorization Hold Request if Overdraft is expired

When the Overdraft was expired and there was no Available Balance on the Current Account, it was still possible to make an Authorisation Hold. Mambu has corrected this behaviour for this scenario, as such if there is no Available Balance and the Overdraft is expired, then the Hold on the account is not permitted.

Production release date: Wednesday, 3rd of October, 2018
