

MAMBU

7.15

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

[\[CUS-1283\] - Reduce the number of logs generated by background workers](#)

[\[CUS-1299\] - Account appraisal during CRONS fails when a notification should be sent](#)

1. New Features

[CORE-1226] - Add a new Mambu feature for overdue penalty accrual algorithm

Part of the CORE-933 - Accrue Overdue Penalties at Account Level initiative, this introduces a new Mambu feature in the administration setup that will dictate whether the accrual of overdue penalties mechanism is turned on or not.

[CORE-1319] - New tenants are created with “Overdue penalties accrual” mechanism enabled

Part of the CORE-933 - Accrue Overdue Penalties at Account Level initiative, this task dictates the default setting for the overdue penalties accrual, which will be “On” for any newly created tenant starting V7.15.

2. Bug Fixes

[CUS-1275] Improve performance when creating entities with custom fields

On using Mambu, whether from the UI or APIs, we have noticed and received feedback with regard to custom field performance in some cases. This issue aims to remove the performance issues when working with custom fields, making sure that the queries behind the scene are optimal.

[CUS-1283] - Reduce the number of logs generated by background workers

This issue is related to cloning of instances via the MyMambu administrative page. More specifically we have uncovered that a cloning process could fail due to background workers auto-scaling feature. Thus we have analysed all the logging that was done during the process and cherry-picked the essential, whilst ensuring that cloning won't fail.

[CUS-1299] - Account appraisal during CRONS fails when a notification should be sent

Introduced with Mambu v7.14, this issue blocks loan account appraisal (eg. setting loan accounts in arrears) when a notification is set up for the specific status change. This fix ensures that loan account appraisal will work, regardless of the notifications set up around it.

Production release date: Thursday, 18th of October, 2018

Note: V7.14 has been deployed together with V7.15. Please find the [V7.14 Release Notes here](#).
