Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bug Fixes

[CUS-1156] - Circuit Breaker is kept on Open state for Templates with variable URL

When a notification template with a variable URL that responds over the circuit breaker limit and requests are sent so that it is transitioned to open, the circuit breaker was remaining in open state. We now fixed this so that the circuit breaker is transitioned from open to half-open in 5 seconds.

[NEO-820] - Error retrieving loans for a Client or Group using the encodedKey instead of ID in GET API 1.0 calls

When making a GET call via API 1.0 using an encodedKey instead of the ID, the API call returned error for invalid group and client IDs. We have now fixed this and the API calls get successfully executed even when using group encodedKey or client encodedKey.
