

MAMBU

8.1

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bug Fixes

[NEO-1046] - Incorrect interest calculation for Revolving Credit accounts with empty schedule and principal balance change transactions

For Revolving Credit product, in some scenarios, the interest was calculated on higher principal balance, for ex when having a disbursement on 27th Sept and then another on 28th, and the interest applied on 28th manually would be calculated based on the 2 disbursed amounts including as such the disbursement made the same day as the interest application. Mambu has corrected this behaviour, however do note that this has not had any impact in your production, given that we addressed this via disabling a refactoring done with v8, which will be re-enabled along with this fix.

[ADM-1128] - Bulk adjustment remains queued and exception is thrown in the logs when performing an adjustment on a loan account

When performing a loan account reversal that would trigger a bulk adjustment, the loading bar remained in 0% progress and an exception was thrown in the logs. With this fix, we made sure the process is queued correctly and the transactions logged after adjustment are re-computed and re-posted on the account.

[CUS-1271] - Exception is thrown when editing an attached document

When attaching and saving a document to an existing entity (client, group, etc), upon wanting to edit its title or description, an exception was thrown and the document could not be edited. With CUS-1271, we solved this case and documents title and description can now be successfully edited.

Production release date: 01 November 2018
