

MAMBU

8.2

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bug Fixes

[CORE-1413] - Interest incorrectly calculated when a repayment is posted in the disbursement date for a revolving credit account

When posting a repayment on the same date as the disbursement day for a revolving loan account, the interest is calculated based on an incorrect amount: Principal + Repayment Amount.

In V8.2, Mambu fixed this issue and the interest is calculated correctly, using the following formula
 $\text{Principal Balance} = \text{Principal Disbursed} - \text{Repayment Amount}$.

[CORE-1410] - Interest amount value from Preview Schedule different from the value in the Schedule tab

The interest amount value from Preview Schedule is different to the one from the Schedule tab, for a Dynamic Loan account with interest calculation method "Declining Balance (Equal Installments)" and repayment calculation method "Reduce Number of Installments" that is using the new interest rounding.

In V8.2, Mambu fixed this issue and the interest amount value from Preview Schedule is the same with the one from Schedule tab.

[CORE-1411] - Upload causes random exception while storing temp file in internal S3 filestore

When attaching a document to an existing entity (client, loan, etc) an exception was thrown and the document could not be uploaded. In V8.2, Mambu fixed this issue and now the attachments can be successfully uploaded

[CUS-1370] - Exception is being thrown when trying to upload a file larger than 5mb

With a library update, file uploads were affected and restricted to 5MB, any upload of a larger throwing an exception. With CUS-1370, we fixed this issue and file upload is now successful even when the file is larger than 5MB.

Production release date: 02 November 2018
