

MAMBU

8.6

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bug Fixes

[CUS-1416] - Inconsistent entry dates provided for transactions for tenants in Uruguay

Given an old library, some tenants in Uruguay experienced inconsistent entry dates on transactions. With this fix, for any tenant from countries dropping the DST (Daylight Saving Time), the transactions are now posted with a correct entry date.

[CUS-1434] - API 1.0 update on client deletes custom field data if not provided

When updating a customer via API and custom field values are not provided, then the custom field value is removed, even though it is not provided in the API with an empty value. In Mambu V8.6, the issue was fixed and the client is updated accordingly.

[CORE-1339] - Trigger the overdue penalties application when the interest is applied on the loan account

There was a behavior inconsistency between the Outstanding penalties and Overdue penalties. Outstanding penalties are triggered by the interest applied transaction, while Overdue penalties are triggered by the cron job execution. The solution provides consistency between all the penalties calculation methods by triggering New Overdue Penalties application when posting an interest applied transaction as well as on repayment (interest is applied as repayment). The affected accounts are fixed and dynamic.

[DEP-582] - Change the validation text displayed for UI and API when performing adjustments for card originated withdrawals

We improved the accuracy of error messages displayed when adjusting card transactions to clarify the tokenized nature of these transactions. On Mambu, tokens can be used to initiate transactions related to cards, digital wallets and other useful purposes. We therefore adjusted our error messages to reflect this capability.

Production release date: 15 November 2018
