Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Improvements

[DEP-39] - Interest Accrued for Savings accounts is NOT logged during Crons when automatic closures are enabled

When backdating a transaction on a dormant account into a period in which accounting was closed, an exception occurred. We have resolved this issue and now allow for the backdating of transactions into all periods on dormant accounts, whilst recording the backdated and adjusted transactions with appropriate entry and booking dates.

2. Bug Fixes

[CORE-1620] - Original account ID/encodedkey is not returned in the API response for refinanced/rescheduled loans

When loan account was rescheduled or refinanced Original account key was visible on UI, but it was not returned in the API response. Therefore, the original and rescheduled/refinanced accounts were not linked and the view history via API was not possible. Mambu found a solution for this issue for API V1.0 and API V2.0 and the Original account key is now returned also through API call.

[FIX-470] - Exception is displayed when the filtering Journal Entries by Empty values on some columns

When trying to filter the Journal Entries by Empty values on some columns an exception was thrown. This issue was fixed and now the filtering is done based on the provided conditions.

[NEO-1325] - Live Migration for inactive Revolving Credit Loan Accounts to new schedule calculator

Mambu has added the improvement for Revolving Credit accounts, based on which the empty installments or 0 principal ones are added to the schedule. With this ticket, Mambu is migrating the existing accounts that are not yet activated to use this new schedule calculator going forward.

Sandbox release: Wednesday, 3rd of April

Production release: Thursday, 4th of April
