

MAMBU

9.16.1

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bugs

[NEO-1380] - Intensive CPU utilization of the RDS due to a query executed on a specific table

After the V9.16 release was performed on Sandbox we noticed that the cron jobs were taking much longer to be executed than normal, since the RDS went to 100% CPU utilization. This performance issue was fixed with this release.

Sandbox release: Tuesday, 23th of April

Production release: Wednesday, 8th of May

Note: V9.16.1 was included in the deployment of V9.16.2
