

MAMBU

9.24

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

[\[CUS-1920\] - Editing custom views filtering criteria may break filters on later access](#)

[\[CUS-1922\] - Custom View created by an Admin user can be deleted by non-Admin users with minimal View Clients permissions assigned through a role](#)

[\[FIX-581\] - Unable to disburse Fixed Group Loan when Backdate and set First Repayment date are provided](#)

[\[CUS-1928\] - IndexOutOfBonuds exception occurs when fetching client information due to empty clientDataItem list](#)

1. Improvements

[CORE-1501] - Exception appears when string custom filter constraint field contains "?" character

Mambu introduced an improvement for string custom fields that contain "?" character. Up to now an exception message was shown to the user. With this update we will notify the user that "?" is an invalid character.

[DEP-941] - Cannot make transfers between two multi-currency deposit accounts with the same currency + accounting setup

With this improvement we allow for transfers from one account in one foreign currency to another account with the same foreign currency.

[FIX-44] - EIR fee amortization fails for a loan account with 0 interest rate

When trying to add a fee at the moment of loan creation, for a product that has a 0% Interest Rate, Mambu will return an error "Fees with Effective Interest Rate amortization can't be used without a positive Interest Rate value." The same situation happens also during cron job execution.

With this fix, Mambu will allow EIR fee amortization method when the interest rate is set to 0% only for the newly created Fixed and Dynamic loan accounts with fees configured.

2. Bug fixes

[CORE-1448] - Background process remains stuck if a BULK_PAY_REPAYMENTS task has multiple errors

When attempting to bulk pay multiple accounts with a known error, the background process was stuck and in the end it was marked as canceled after the two hour timeout. Mambu has addressed the issue and the error message is now properly displayed, explaining that the background process has failed.

[CORE-1528] - View change history throws exception when account had first repayment date modified

After the loan was created and then the name and first repayment was edited, an exception message appeared when the client tried to view change history. Mambu has addressed the issue and provided the fix. Name and first repayment can now be identified in View Change History log.

[CORE-1599] - Unable to reschedule/refinance loan account with Index Interest Rate via API v1 if the product has no default interestSpread set

For Dynamic Term Loan with index interest rate, that does not have set a default for the interest spread percentage, API V1.0 call failed and it was not possible to reschedule or refinance the account. The issue is now solved and account can be successfully rescheduled or refinanced.

[CORE-1621] - Unexpected error is displayed when trying to delete a client with a task created when API usage property is enabled

There was an issue with the deletion of a client with tasks, when API usage property was enabled. Mambu has addressed the issue and provided a fix.

[CORE-1815] - Loan product API schedule unexpected params behaviour

Mambu had an issue with the usage of parameter "FixedDaysOfMonth" for API version 1.0. When an API call was made, there was a response, that Fixed days of Month are missing, even though there was a default setting for a day of the month on a product level. We provided a fix for the issue and now the schedule is returned as expected.

[CUS-771] - UI birthdate display error when setting birthdate as DST Change Date for Timezones that renounced at DST

With this fix we solve a display issue for the client birthdate and time zones that renounced Daylight Savings Time. In these cases, the user would see the birthdate as one day ahead than the one that was registered in the system.

[CUS-1920] - Editing custom views filtering criteria may break filters on later access

We have received reports on custom views not being accessible after filters have been edited at a later time. This fix covers this issue and now filters can be safely edited without impact on the custom view.

[CUS-1922] - Custom View created by an Admin user can be deleted by non-Admin users with minimal View Clients permissions assigned through a role

Administrators can create custom views for users and share these with them. The users can access the custom view, and shouldn't be able to delete it, a behaviour that has been enforced with this fix.

[FIX-581] - Unable to disburse Fixed Group Loan when Backdate and set First Repayment date are provided

When trying to backdate the disbursement of a Fixed Group Loan and also the First Repayment date is provided, the disbursement is not successful. In this version of Mambu, the behaviour was fixed and the disbursement is successful

[CUS-1928] - IndexOutOfBonuds exception occurs when fetching client information due to empty clientDataItem list

This fix covers an error that would show up at times when loading client records with large amounts of data. When accessing a record, the user would be prompted with an error. The workaround was to reload the page and the client record will be displayed.

Sandbox release: Tuesday, 30th of July

Production release: Wednesday, 31st of July
