

MAMBU

9.8

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bug Fixes

[CORE-1585] Maximum number of checks error thrown for account using new RNI method when entering pre-payment

For loan accounts, which use new RNI configuration several errors occurred, when prepayment was made. Mambu fixed the issue and prepayment can now be made successfully.

[API-1897] - Cannot PATCH revolving credits with schedule

For revolving loans that have a schedule generated, the PATCH operation via APIs 2.0 was failing, especially when changing the loan account branch. This has been now fixed and revolving loan accounts can be safely edited via APIs 2.0.

[TCS-1369] - Security fix in Reporting component

[CUS-1683] - Cannot export to excel custom views which have a boolean column on useast1

With this fix, we resumed the normal exporting of a custom view with a boolean field.

[CUS-1685] - Notifications are not sent and remain stuck in QUEUED state after cron execution throws NullPointerException

After V9.7 release, some tenants experienced issues when sending notifications. That's all in the past with this fix which ensures that notifications are sent as expected.

Sandbox release: Wednesday, 27th of February

Production release: Thursday, 28th of February
