

MAMBU

4.6.13

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bug Fixes

[MBU-18970] - Multiple UI glitches in Mambu when running on the latest version of Chrome browser

With this release, Mambu fixed multiple UI glitches encountered on Chrome browser. As a consequence of it, search results were not displayed, widgets and menu items appeared in wrong sections of the screen and various items were not possible to rearrange or to use altogether. The cause of the problem was related to the changes done by Google Chrome in their last update (Version 61) which has broken some GWT widgets . We've managed to 'cherry-pick' the fix manually in the GWT V2.8.0 library and all the inconveniences should be now resolved.

Sandbox release date: Tuesday, 24th of October, 2017
