

MAMBU

4.6.17

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

Bug Fixes

[ADM-154] - Unexpected error is thrown when a non-admin user is trying to create a user without "Can access other credit officers clients" permission

[CUS-131] - Notifications are sent multiple times because of timezone differences

[CUS-319] - Custom field availability is randomly set to unavailable

[DEP-43] - Cannot post backdate transactions on undo closed Active maturity deposit accounts

[DEP-46] - Undo close matured deposit accounts leads deposit in inconsistent state when performing this action via API

1. Bug Fixes

[ADM-154] - Unexpected error is thrown when a non-admin user is trying to create a user without "Can access other credit officers clients" permission

When a non-admin user that is not assigned to any branch created a new user and assigned this user to a specific branch, an error left the 'Save user' action in infinite loading. With this fix, user creation is successful in the above scenario. A similar case for which the same error was generated: [AMD-141] got fixed with this solution as well.

[CUS-131] - Notifications are sent multiple times because of timezone differences

With this fix, Mambu ensures that the automatic mechanism of sending Webhook, SMS and Email Notifications will not be triggered multiple times for the same event. The duplicate notifications were sent due to the hourly Crons that run at midnight, finding some accounts that throw an error (i.e. those which were not yet in Arrears) and after 1 hour it was re-attempting to check the accounts, generating again the notification.

[CUS-319] - Custom field availability is randomly set to unavailable

The defect around this bug was found in the persistence layer between a Custom Field and the Custom View in which it was contained while having the default column preset configuration. After modifying the value of such Custom Field an edge case scenario surfaced in the UI, causing the availability setup of the field to be cleared. This inconvenience has now been resolved.

[DEP-43] - Cannot post backdate transactions on undo closed Active maturity deposit accounts

When a close deposit account operation was undone via `undo_close` API call, the activation date was set to the invocation date. This meant that a user could no longer do backdated transactions on the account, in accordance with the original activation date. With this fix, deposit accounts which are undo closed will keep their original activation date once they are transitioned to active state.

[DEP-46] - Undo close matured deposit accounts leads deposit in inconsistent state when performing this action via API

When a close deposit account operation was undone via `undo_close` API call, the new account state was always set to active. This lead to closed matured accounts becoming active again, posting transactions was allowed and also undoing / changing the maturity period. With this fix, the account state for closed Matured accounts is preserved after undo close operation.

Production release date:Thursday, 23rd of November, 2017
