MAMBU

4.6.4

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

Contents

1. Bugs

KMBU-140 - Import is still running after an exception is thrown

When performing an import, the import would continue running even after an exception was thrown.

Mambu has corrected this behaviour and the import will continue in spite of the exception being thrown.

MBU-18716 - Exception is logged during the nightly cron jobs when sending notifications for groups

When using a notification template, such as SMS, with Credit Officer as recipient, and used for a pure loan group product which is available for group targets, with at least one client added to the group and the client set with a group role (such as "President"), but without any Credit Officer set for the account, an exception would be thrown.

Mambu has addressed this and no exceptions should be thrown anymore.

2. Improvements

KMBU-107 - Exception thrown during sandbox cloning

When a clone of sandbox is performed, the old sandbox database is removed and a new one is being created, however due to users still being logged in the previous sandbox environment, some exceptions would be thrown.

To address this, Mambu will automatically logout the users from the sandbox instance that is being removed, while the cloning is ongoing.

Sandbox release date: September 5th, 2017
