

# MAMBU

## 4.6.6

Release Notes

# Overview

## About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

## What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

## Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting [support@mambu.com](mailto:support@mambu.com) or your account manager.

[\[MBU-17444\] - Create migration script to update "Arrears Position" for existing dynamic loan accounts](#)

### 2. Bugs

[\[MBU-18871\] - Balance sheet report end of month is not calculated properly for "Month" filter, as opposed to "Range"](#)

[\[MBU-18867\] - Grace period installments are not displayed when refinancing/rescheduling a loan account using the same product that was meantime updated to accept grace period installments](#)

[\[KMBU-134\] - CreationDate and LastModifiedDate for create loan account API are persisted 1 second in the future due the conversion](#)

[\[KMBU-109\] - Deposit transactions with a fractional amount can't be done using BitCoin currency via API](#)

## 1. Improvements

### **[MBU-16818] - Create migration script to update "Arrears Position" for existing fixed loan accounts**

With 4.6.6 we've enabled the migration script for Arrears Position for existing fixed accounts.

### **[MBU-17444] - Create migration script to update "Arrears Position" for existing dynamic loan accounts**

With 4.6.6 we've enabled the migration script for Arrears Position for existing dynamic accounts.

 **Note:** The migration process will vary for each tenant, depending on the number and complexity of the accounts. The total process of the migration can take up to 10 days to complete. Any live transaction posted in this time frame will not affect nor be affected by the migration script.

## 2. Bugs

**[MBU-18871] - Balance sheet report end of month is not calculated properly for "Month" filter, as opposed to "Range"**

The Balance Sheet report was fixed to retrieve the correct results when fetching data per specific Month.

**[MBU-18867] - Grace period installments are not displayed when refinancing/rescheduling a loan account using the same product that was meantime updated to accept grace period installments**

In this version we've also delivered the fix for the case when a loan account was created before the grace period was defined on the product - it did not have an option to add the grace period at rescheduling or refinancing.

**[KMBU-134] - CreationDate and LastModifiedDate for create loan account API are persisted 1 second in the future due the conversion**

V4.6.6 also fixes the API POST/api/loans endpoint in which CreationDate and LastModifiedDate were persisted 1 second in the future due the conversion

**[KMBU-109] - Deposit transactions with a fractional amount can't be done using BitCoin currency via API**

Deposit transactions with a fractional amount can now be executed using BitCoin currency via API (POST call: api/savings/ {ID}/transactions).

Sandbox release date: Tuesday, 19th of September, 2017
