

MAMBU

4.6.8

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Improvements

[MBU-19152] & [MBU-18794] - Update migration script for capturing Principal Balance correctly and display it in Transactions tab

With APP-626 Mambu started capturing the Principal Balance and the Arrears position after each transaction at loan account level. In order to provide this information in the past as well, Mambu will be performing a migration script for all existing accounts. With this ticket, Mambu has addressed several loan accounts scenarios to ensure an accurate value for the migrated accounts.

[MBU-19152] - As a Credit Officer, I want to edit interest amount for fixed loans before approval

This improvement will allow organization to edit the interest amounts of Fixed Term loans which are exceeding their originally calculated interest values . Since the schedule is bespoke and does not follow Mambu calculations anymore - the amount of the total interest originally calculated should not be applicable anymore. Therefore we now allow entering an interest amount higher than the expected one by removing the validation "Cannot reallocate applied interest on next installments" for when a schedule is edited, only if the account is in Partial Application or Pending Approval state. After the account is activated, the interest amount cannot be set to a higher value.

[MBU-19168] - Loading Document IDs information in overview/edit client action causes high CPU load on Master RDS

For tenants having more than 50k Document IDs we were experiencing a high CPU usage which was slowing down the overall performance on both client overview & client edit operations . With Mambu 4.6.8 this issue was fixed.

Sandbox release date: Friday, 29th of September, 2017
