Release Notes

# Overview

## About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

## What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

## Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting [support@mambu.com](mailto:support@mambu.com) or your account manager.

[\[NEO-394\] - Fix deployment failure on USEast1 Production environment](#)

## 1. Bug Fixes

### **[CUS-485] - Exception thrown when posting Client without ID Document expiry date**

Mambu experienced an internal error when creating a Client via APIs having an ID Document template without expiry date (Valid Until left empty). This inconvenience has now been fixed.

### **[CUS-374] - Custom Field "Usage" section greyed out and not clickable**

Due to the fact that after editing a built-in Custom Field, the read-only settings for that custom field lingered for the whole session, the fields from the "Availability" column appeared greyed out and clicking on the checkboxes yield no results. Mambu has fixed this inconvenience with this release.

### **[CUS-50] - Uploading the same file in 2 different tabs causes one invalid file upload**

Uploading the same document file in two separate tabs ,for the same client, resulted in a single file being saved and for the other one an error was returned. With this release Mambu corrected the situation and now both files are successfully saved.

### **[ADM-225] - Query restriction from UI is accidentally applied to cron jobs during late organization jobs**

This fix ensures that cron jobs will run as expected, even in the case when queries for some indicators might take more time than expected given a high data load.

### **[ADM-186] - Taxes expected/due are not displayed in Schedule for imported loan accounts**

This fix ensures taxes expected/due will be shown on Schedule after the import loan is done and successful. For imported transaction Taxes, info will now be displayed in View details.

### **[ADM-38] - Resetting Data fails at rescheduled and refinanced Loan Accounts**

When creating a new client and a new loan account for the client, if after disbursement the loan was rescheduled, an error occurred in the UI if trying to reset all data. After this fix, data is successfully reset in the above scenario.

### **[NEO-394] - Fix USEast1 Production environment deployment problem**

In V5 Mambu added a new feature for Credit Arrangement states. With this feature, we've ran a migration script in order to update the existing Credit Arrangements with their state and approved date. For some tenants we had some performance problems with this migration script, which were fixed in this minor release

Production release date: Friday, 19 of January, 2018
