Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bug Fixes

[ADM-515] - Add server side logs for the cases when is thrown NotAuthorizedException

On the production environments clients receive lots of errors with the message "Permission Denied". The case is not easy to identify and extra logs are required. Mambu will log the stack-trace and the message for the case when NotAuthorizedException is thrown.

This problem seem to be caused by our infrastructure provider and the root cause was not fully identified at the moment. However, as a temporary workaround the user can log out from the application and log in again as it seems to address the issue in most cases.

Production release date: April 30th 2018
