

MAMBU

5.26

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bug Fixes

[ADM-502] - Magic search returns the results from the previous search when switching branches

When a user made a specific search for a client, using Magic search, while a single branch was selected, the result returned the client as expected. When the user switched to all branches, the same search result would not be returned, as the caching mechanism kept the previous results.

In V5.26, Mambu fixed this issue and now magic search results are returned correctly when switching branches.

[DEP-318] - Temporary folder permissions are not always applied

This fix is following DEP-316, released in V5.25 for users in European environments that were experiencing document upload and report execution failures, caused by our infrastructure provider.

With this improvement, Mambu fixes some possible problems that might occur on different environments.

Production release date: Wednesday, 2nd of May 2018
