

MAMBU

6.8

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

1. Bug Fixes

[ADM-555] - Allow specifying the production tenant ID when executing the IMPORT via the queue API

Mambu introduced the ability to specify the production tenant ID when importing a production database into a sandbox environment via Sandbox Queue API.

[CORE-40] - Cron FAILS when Interest is not applied due to interest lock at the moment of repayment

Currently, when cron runs an interest calculation is triggered for the period before the repayment was entered and the action will fail.

In V6.8, Mambu fixed this issue and at cron execution, the interest applied is not posted the due dates which have at least one financial transaction posted after that due date.

[CORE-443] - Cancel button is not working for Balance Sheet on big tenants

When generating the Balance Sheet report the "Cancel" button is not working properly and the system generates the report nonetheless.

In V6.8, Mambu fixed this issue and the report generation is stopped as soon as the "Cancel" button is pressed.

[CORE-819] - Rename the label for Loan Configuration, related to Tolerance Period on Non-Working Days method

When configuring a loan product, there is an option of setting the "Tolerance Period Non Working Days Method" to either include or exclude non-working days in the arrears tolerance period.

In V6.8, Mambu renamed the label into "Non-Working Days in Arrears and Penalty Calculation Method" in order to reflect that also the Penalties calculation is included.

[DEP-342] - Error message should be returned when you try to create a deposit account with lockedBalance and holdBalance bigger than 0

When creating a deposit account via API with an amount bigger than 0 under lockedBalance and holdBalance parameters, no error message was returned although the account was created with the amounts set to 0. This has been corrected and Mambu will return a relevant status, such as:

```
{
  "returnCode": 3621,
  "returnStatus": "LOCKED_BALANCE_NOT_ALLOWED"
}
```

Sandbox release date: Tuesday, 3rd of July, 2018

Production release date: Wednesday, 4th of July, 2018
