

AgStudio 2018 Service Pack 2.4

September 18, 2018

Release Notes

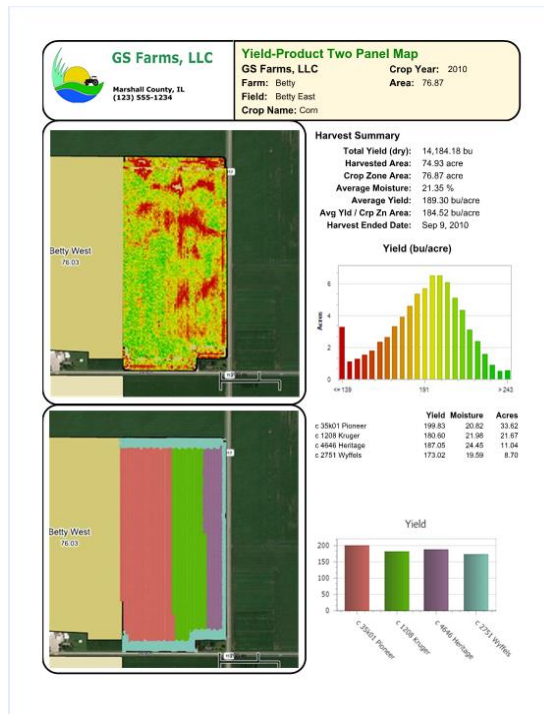

Enhancements

Card Managers

- Modified the John Deere Gen4 card manager to set the width mode on harvest data correctly, allowing the width to be modified within the Yield Site Editor tool.

Reports

- Implemented a new Yield-Product Two Panel Map through the Report Books extension. The report pulls the as-planted and harvest data to display the combination of yield and planter data on a single page.

- Added Total Acres and Total Samples to the Soil Test Sampling Summary report
- Modified the Fields by Farm report in the Report Books extension to allow the display of the field coordinates in place of the FieldID.

Sampling Work Order

- Enabled the ability to persist lab information within a Sampling Work Order, allowing the submittal sheets to be printed at a later date without risk of the properties changing.
- Within the Sampling Work Order extension, if a field does NOT have a field boundary, the Reported Area from the Acres column is used.

- Added the A&L Canada QR code to the submittal sheet within the Sampling Work Order extension.

AgStudio MAP Enhancements

- When creating a new directed sampling layer is created with the MAP app, use the Mark Sample button to move the points appropriately.
- Ensured that when rotating the grid that the grids are not skewed.
- Added the ability to display a directed layer that has records, but no SampleID values populated.
- Corrected a server side component that would not persist the data type of layers.
