

AgStudio 2019 SP0.2

April 3, 2019

Release Notes

Enhancements

- 🔗 Enhanced the Seeding Recommendation Map report printed through VRS Export to display only the Set Points selected.
- 🔗 The “All” option within the grouping feature in VRS Export and VRF Export has been redefined to ensure that grouping only occurs when the recommendation contains “like” products, which matches the rule on the grouping by “Farm” option.
- 🔗 Three new reports are now available:
 - Farm and Field Proposal Report
 - Planting Plan Report
 - Crop Scouting Report

Bug Fixes

- 🔗 The ModifiedDate is now updated when changes are made to the layer while the original values for CreatedDate and CollectedDate are left unchanged.
- 🔗 Corrected an error in the Rename Layer Attribute extension that previously generated an error when attempting to use the extension.
- 🔗 Updates were made to correct an error that occurred when using VRF and VRS Exports with wireless data transfer providers.
