

AZ-103

Microsoft Azure Administrator

About this course

This course teaches IT Professionals how to manage their Azure subscriptions, create and scale virtual machines, implement storage solutions, configure virtual networking, back up and share data, connect Azure and on-premises sites, manage network traffic, implement Azure Active Directory, secure identities, and monitor your solution

Duration

40 hs

Audience profile

This course is for Azure Administrators. Azure Administrators manage the cloud services that span storage, networking, and compute cloud capabilities, with a deep understanding of each service across the full IT lifecycle. They take end-user requests for new cloud applications and make recommendations on services to use for optimal performance and scale, as well as provision, size, monitor and adjust as appropriate. This role requires communicating and coordinating with vendors. Azure Administrators use the Azure Portal and as they become more proficient they use PowerShell and the Command Line Interface.

Prerequisites

- Understanding of on-premises virtualization technologies, including: VMs, virtual networking, and virtual hard disks.
 - Understanding of network configuration, including TCP/IP, Domain Name System (DNS), virtual private networks (VPNs), firewalls, and encryption technologies.
 - Understanding of Active Directory concepts, including domains, forests, domain controllers, replication, Kerberos protocol, and Lightweight Directory Access Protocol (LDAP).
 - Understanding of resilience and disaster recovery, including backup and restore operations.
-

Course Outline

Module 1: Azure Administration In this module, you'll learn about the tooling Azure Administrator uses to manage their infrastructure. This includes the Azure Portal, Cloud Shell,

AZ-103

Microsoft Azure Administrator

Azure PowerShell, CLI, Resource Manager, and Resource Manager_Templates. The demonstrations in this module will ensure you are successful in the course labs.

Lessons

- Azure Portal and Cloud Shell
- Azure PowerShell and CLI
- Resource Manager
- ARM Templates

Module 2: Azure Virtual Machines In this module, you'll learn about Azure virtual machines including planning, creating, availability and extensions.

Lessons

- Virtual Machine Planning
- Creating Virtual Machines
- Virtual Machine Availability
- Virtual Machine Extensions

Lab : Deploy and Manage Virtual Machines Lab : Virtual Machines and Scale Sets

Module 3: Azure Storage In this module, you'll learn about basic storage features including storage accounts, blob storage, Azure files, and storage security.

Lessons

- Storage Accounts
- Azure Blobs
- Azure Files
- Storage Security

Lab : Implement and Manage Storage

Module 4: Virtual Networking In this module, you'll learn about basic virtual networking concepts like virtual networks, IP addressing, Azure DNS, and network security groups.

Lessons

- Virtual Networks

AZ-103

Microsoft Azure Administrator

- IP Addressing
- Azure DNS
- Network Security Groups

Lab : Configure Azure DNS

Module 5: Intersite Connectivity In this module, you'll learn about intersite connectivity features including VNet Peering, VNet-to-VNet connections, Site-to-Site Connections, and ExpressRoute.

Lessons

- VNet Peering
- VNet-to-VNet Connections
- ExpressRoute Connections

Lab : VNet Peering and Service Chaining

Module 6: Monitoring In this module, you'll learn about monitoring your Azure infrastructure including Azure Monitor, alerting, log analytics, and Network Watcher.

Lessons

- Azure Monitor
- Azure Alerts
- Log Analytics
- Network Watcher

Lab : Network Watcher

Module 7: Data Protection In this module, you'll learn about data replication strategies, backing up files and folders, and virtual machine backups.

Lessons

- Data Replication
- File and Folder Backups
- Virtual Machine Backups

Lab : Azure Site Recovery Between Regions

AZ-103

Microsoft Azure Administrator

Module 8: Network Traffic Management In this module, you'll learn about network traffic strategies including service endpoints, network routing, Azure Load Balancer, and Azure Traffic Manager. Lessons

- Service Endpoints and Network Routing
- Azure Load Balancer
- Azure Traffic Manager

Lab : Load Balancer and Traffic Manager

Module 9: Azure Active Directory In this module, you'll learn about Azure Active Directory (AD) including Azure AD Connect and Azure AD Join. Lessons

- Azure Active Directory
- Azure AD Connect
- Azure AD Join

Lab : Implement Directory Synchronization

Module 10: Securing Identities In this module, you'll learn how to secure identities including Multi-Factor Authentication, Azure AD Identity Protection, and Self-Service Password Reset. Lessons

- Multi-Factor Authentication
- Azure AD Identity Protection
- Self-Service Password Reset

Lab : Azure AD Identity Protection Lab : Self-Service Password Reset

Module 11: Governance and Compliance In this module, you'll learn about managing your subscriptions and accounts including role-based access control, users and groups, and Azure policy. Lessons

- Subscriptions and Accounts
- Role-Based Access Control (RBAC)
- Users and Groups
- Azure Policy

AZ-103

Microsoft Azure Administrator

Lab : Role-Based Access Control Lab : Governance and Compliance

Module 12: Data Services In this module, you'll learn how to effectively share data using Import and Export service, Data Box, Content Delivery Network, and File Sync. Lessons

- Content Delivery Network
- File Sync
- Import and Export Service
- Data Box

Lab : File Sync
