

# The Platform For 3D Printing

## Usher In Your Own Renaissance

Is your School's 3D Printing Program in the "Dark Ages", marked by dust, broken filament, and uninspired students?

Just like Gutenberg's printing press spurred on a renaissance, your school's 3D printer can enlighten your students, drive engagement in STEM, and produce better student outcomes.

## The Polar Cloud will help build:

- A robust printing program where students are confident in their design thinking skills and take ownership in the 3D printer and outcome
- A student body of 21st century learners that grasp abstract subjects and know how to problem solve
- Active and engaged students that design, execute, and compete.
- A NGSS aligned curricula set that is made for 3D printing and offers your educators flexibility

# Transform your printing program

Conduct ALL of your 3D Design, 3D Printing, and related STEAM activities online with your Polar Cloud School Account.

## Tiered Access

Involve your students in the printing process, no matter their skill level.

As they learn the ropes you can upgrade their access and have them own more of the printing process - saving teachers time.

## Automation

No more writing on post it notes, sending emails, or hunting down that student whose print just finished or the one who needs to resubmit their object. Your actions on the platform send texts, notifications, and email alerts to those who need to see them.

## Remote Control

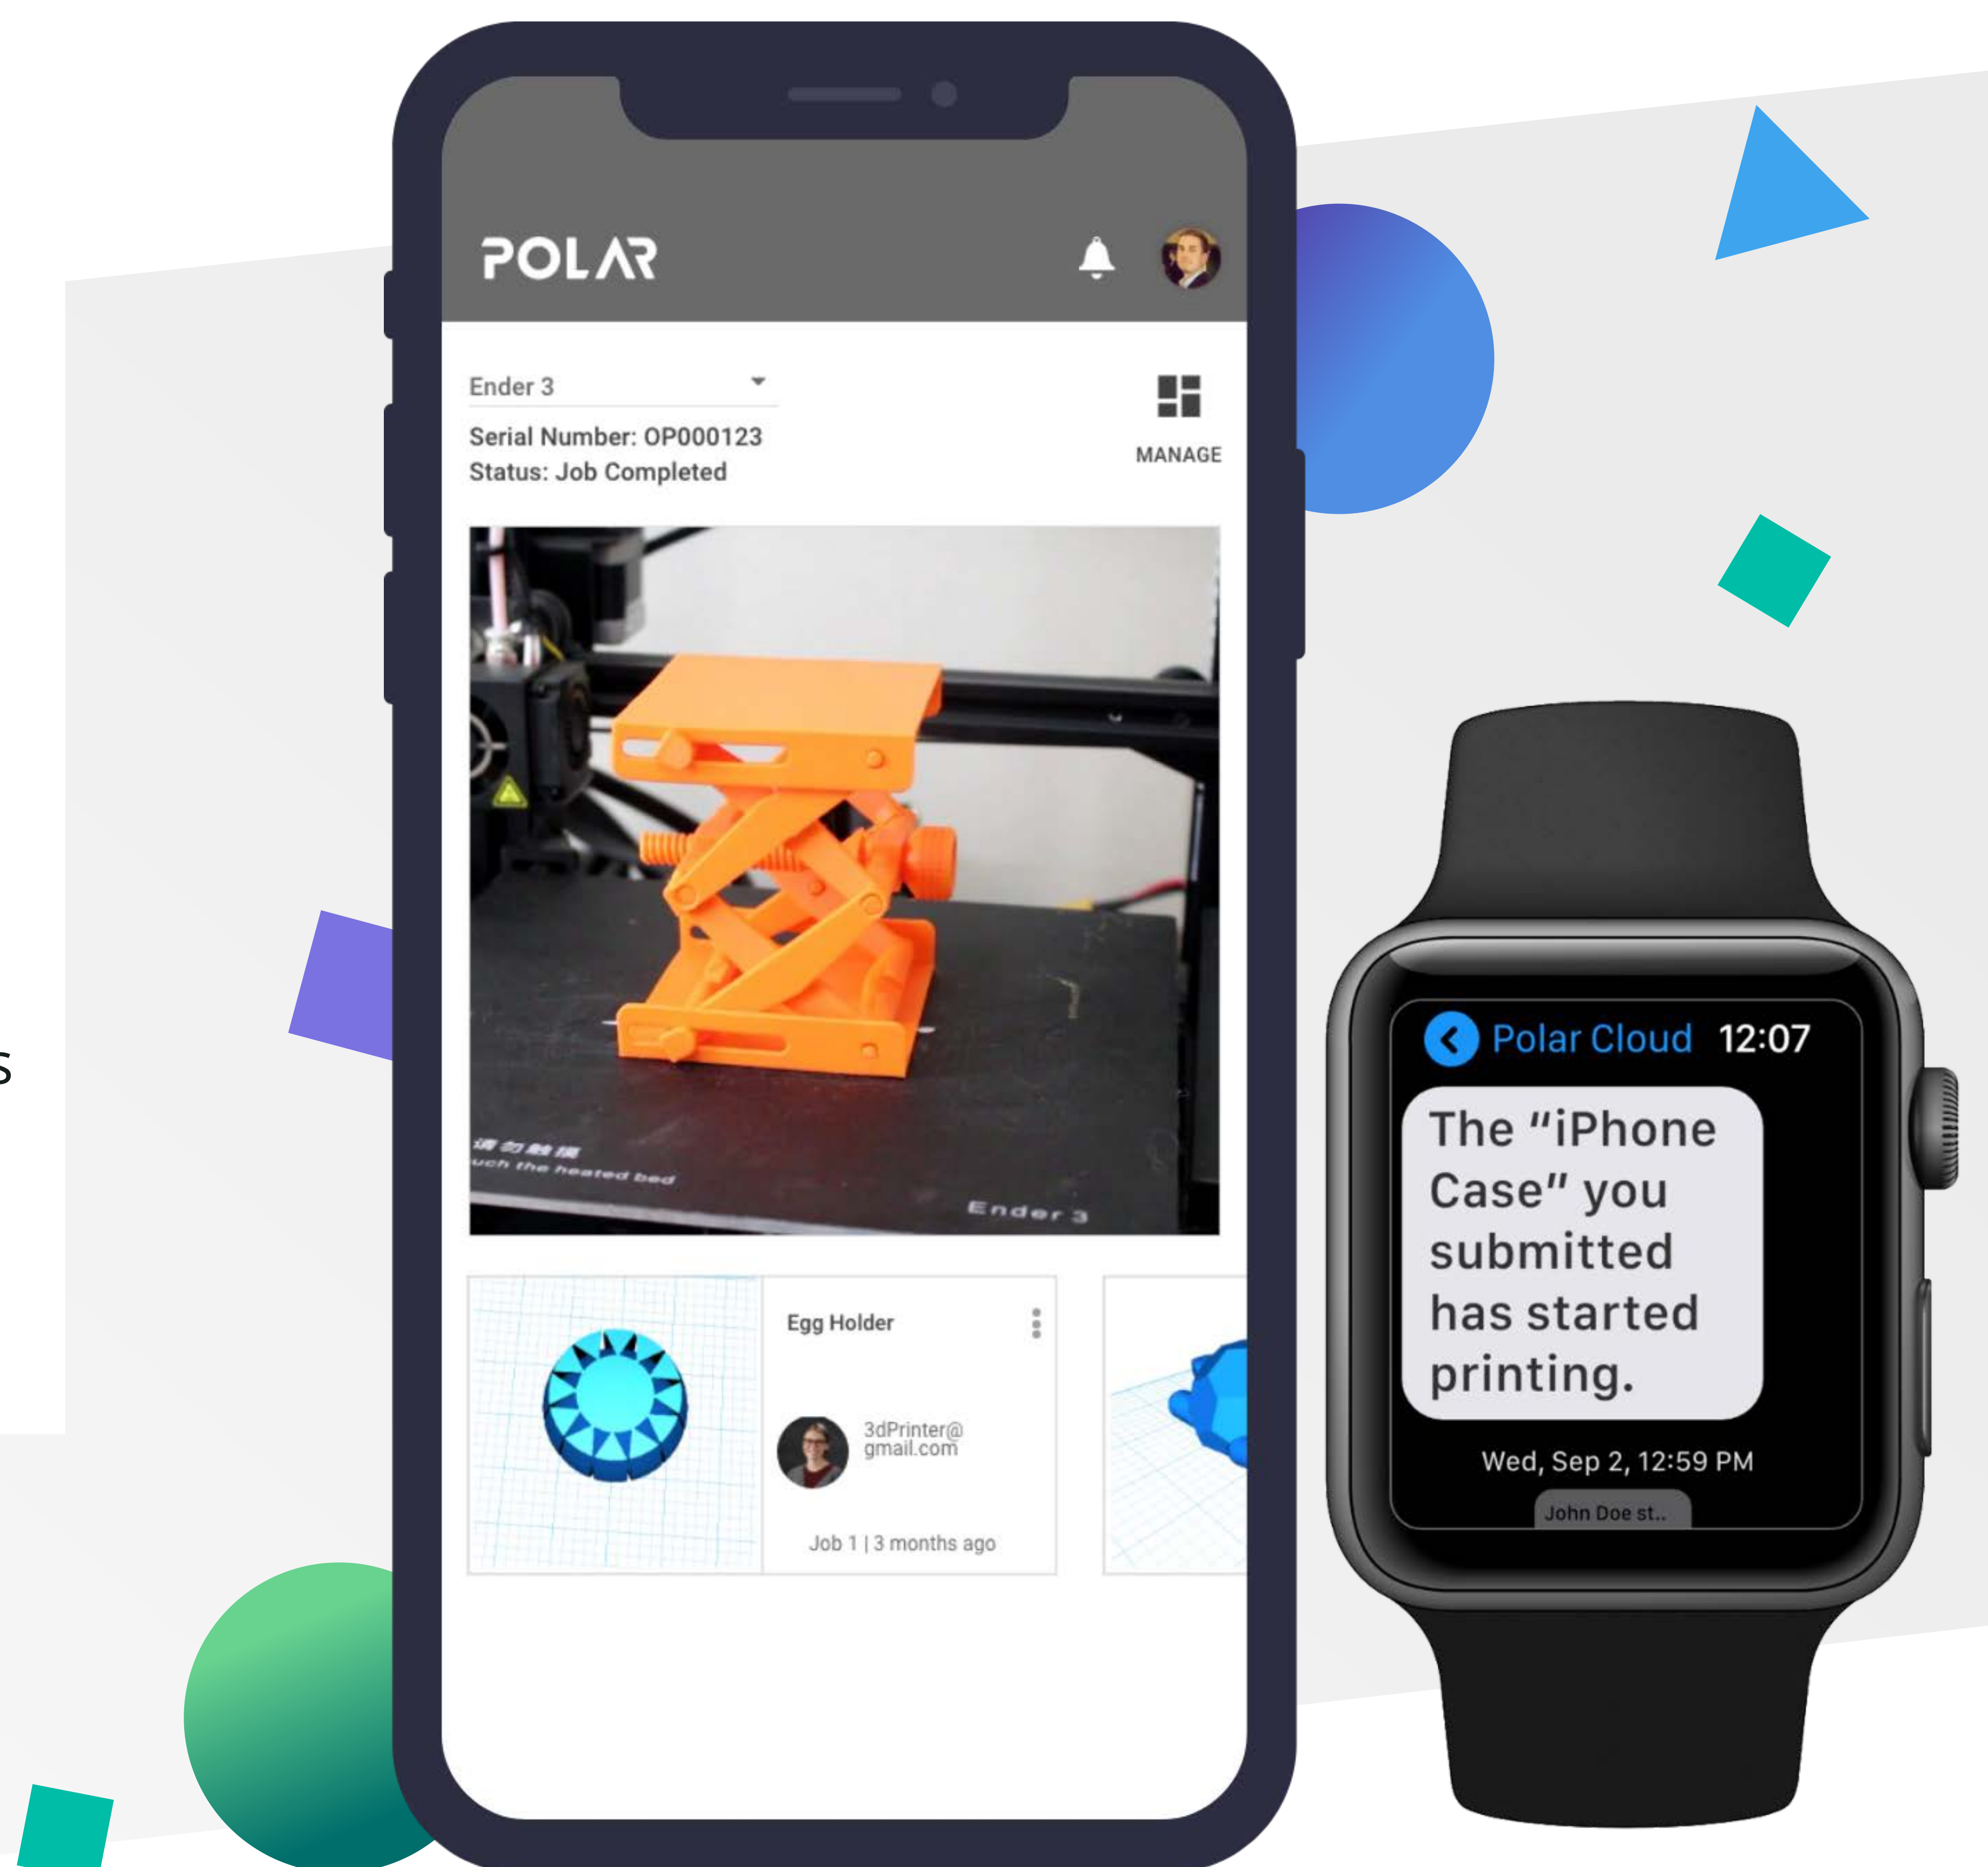

Print jobs take hours! Start, stop, pause, and check in on your printer from recess, bus duty, home, or anywhere!

Use your phone, laptop, or any device to operate and control your printers and share them with others in seconds.

## Standardization

Normally, each 3D Printer would need its own proprietary slicing software. And they aren't iPad or Chromebook compatible. Yuck!

Since the Polar Cloud works with all 3D printer makes and models, students are then familiar with the software from 1st to 12th grade. Teachers across disciplines can share know-how and use the same terms, lessons, and workflows.
