# How to Determine Complexity Level

<table>
<thead>
<tr>
<th>Complexity Level</th>
<th>Factors</th>
</tr>
</thead>
</table>
| 97161 - Low      | - No comorbidities or personal factors (that impact the plan of care)  
                   - The examination (using standardized tests & measures) will cover 1-2 elements from any of the following: body structure or function, activity limitations or restrictions  
                   - Clinical presentation is stable or uncomplicated |
| 97162 - Moderate | - 1-2 comorbidities or personal factors (that will impact the plan of care)  
                   - The examination (using standardized tests & measures) will cover 3 or more elements from any of the following: body structure or function, activity limitations or restrictions  
                   - Clinical presentation is evolving, the characteristics are changing |
| 97163 - High     | - 3 or more comorbidities or personal factors (that impact the plan of care)  
                   - The examination (using standardized tests & measures) will cover 4 or more elements from any of the following: body structure or function, activity limitations or restrictions  
                   - Clinical presentation is unstable with unpredictable characteristics |
