

## **Two Rivers Coop has the answer!**

Introducing our soil and tissue testing program.

For \$100 per field we will come pull a multi-core soil sample, mix and mail them – then review the results with you in person. We will then do an “in season” tissue test which will also be reviewed with you in person.

*\* Field size will be agreed upon acreage, such as a 40, 80, a quarter (160), a half section (320) or section (640) \**

## **What will all this testing tell you?**

The soil test will show the standard N, P, & K levels with soil PH and a full micro nutrient analysis. The tissue test will show what your plants are pulling from the soil and will reveal any nutrient deficiencies.

Contact the facility nearest you to schedule your testing.
