

# Slice™

Advanced Tissue Systems

**Slice™ is an advanced tissue management system comprised of custom recommendations suited to your farming operation. Tissue samples are extracted from your field based upon field specific observations. These samples are analyzed by approved labs who are verified to meet strict requirements and quality guidelines to provide the most qualified and consistent results. These results are then processed through an advanced system which accounts for several key variables that affect crop and yield performance.**

**Upon final analysis your sales representative will the results and findings and will discuss a recommendation that is best suited for your crop. Where other systems leave you with an over simplified and general recommendation, Slice delivers a custom tailored recommendation designed for your crop, your field, and your farm to maximize your investment.**

Report Date: 05/13/2013  
Location: WHEAT  
Farm: WHEAT  
Field: WHEAT

Sample: 1  
Report Number: F11310-5019  
Lab ID#: A004  
Crop: Corn  
Growth Stage: Less Than 12 inches (VE-V3)

| TEST RESULT | TARGET    | Percent | Low | High | SOLUTIONS | RATE |
|-------------|-----------|---------|-----|------|-----------|------|
| N 0.12%     | 0.0-0.01  |         |     |      |           |      |
| P 0.02%     | 0.0-0.01  |         |     |      |           |      |
| K 0.22%     | 0.0-0.01  |         |     |      |           |      |
| S 0.27%     | 0.07-0.17 |         |     |      |           |      |
| Ca 0.60%    | 0.00-0.10 |         |     |      |           |      |
| Mg 0.19%    | 0.0-0.01  |         |     |      |           |      |
| B 5 ppm     | 17-66.4   |         |     |      |           |      |
| Cu 12 ppm   | 11-38.4   |         |     |      |           |      |
| Fe 381 ppm  | 80-1700   |         |     |      |           |      |
| Mn 95 ppm   | 100-500   |         |     |      |           |      |
| Zn 40 ppm   | 270-618   |         |     |      |           |      |
