Crop Hail

Are you worried about losing a field to hail?

PRODUCT OVERVIEW

Crop Hail (CH) insurance is a private product which provides protection against unavoidable loss to a crop caused by hail, fire, or lightning. During transport to the first place of storage, Crop Hail coverage also includes collision, overturn, and collapse of bridges, docks, and culverts.

Each Crop Hail plan is written on a dollar-per-acre basis, with the amount of insurance set by the policyholder. AgriSompo North America offers one of the most extensive Crop Hail risk management programs available, with a large variety of plans ranging from complete hail protection to 50% deductibles.

CROP HAIL ENDORSEMENTS

In addition to stand-alone Crop Hail coverage, Companion Hail and Production Hail endorsements are available, which may be added to an underlying MPCI policy.

With any Federal Subsidized Crop Insurance program, the insured assumes the risk on a percentage of their crop. Companion and Production Hail insurance products lessen this risk by covering the portion of the crop not covered by Multi-Peril Crop Insurance (MPCI). These programs work jointly with a producer's YP or RP policy to offer excellent coverage at an affordable price, so producers benefit from hail coverage where they need it most: above the guarantee established by their YP or RP policies.

Available as stand-alone or endorsement coverage.

Choose your plan from a variety of options.

Protects against hail, fire, lightning, and transit damage.
