Analysis	Level Found		Units	Reporting		Analyst- Date	Verified- Date
	As Received	Dry Weight		Limit	Method		

n.d. = not detected , ppm = parts per million, ppm = mg/kg , ppb = parts per billion Mineral analysis performed by ICAP using a wet digest procedure.
Moisture determined using 3hr@105 Deg. C Method.
Total starch value includes all hydrolyzable carbohydrates.

DISTILLER DRIED GRAIN****Detailed Method Description(s)****AOAC 2008.02 (mod)**

Analysis of mycotoxins is based on AOAC 2008.02 (modified). Samples are extracted using a polar extraction solvent and then filtration through immunoaffinity columns. The extract is analyzed by LC/MS or LC/MS/MS technology. The mycotoxins are determined by retention time, molecular weight, and molecular fragmentation ions.

AOAC 990.03

Analysis follows MWL FD PROC 70 which is based on AOAC 990.03. The sample is placed in a combustion instrument and the amount of nitrogen is obtained. The nitrogen value is multiplied by a factor of 6.25 and that value reported as crude protein.

AOAC 945.16

Analysis follows FD PROC 26 which is based on AOAC 2003.05. The sample is extracted with drip immersion of the sample in petroleum (pet) ether. The pet ether is poured into a pre-weighed container and then evaporated. The container is re-weighed and the increase in weight is reported as crude fat

ANKOM Tech. Method

Analysis follows MWL FD PROC 39 which is based on AOCs Ba 6a-05. The sample is sealed in a small bag and the bag immersed in a solution that dissolves certain materials. The bag is washed and dried and re-weighed. The material remaining in the bag is reported as acid detergent fiber

Ash

Analysis follows MWL FD PROC 19 which is based on AOAC 942.05. The sample is weighed and placed in a muffle furnace at 600 oC. After a period of time, the sample is removed and the remaining material weighed and reported as ash. Moisture and organic material is driven off.

AACC 76-11 (mod)

Analysis follows WC PROC 47 which is based on modified AACC-76-11 and YSI Application Note 319. A sample is combined with water and placed in an autoclave. After the autoclave step, buffer and amyloglucosidase enzyme are added and the sample placed in a water bath where the starch is hydrolyzed to glucose. The glucose is then determined using a YSI glucometer.

The result(s) issued on this report only reflect the analysis of the sample(s) submitted.

REPORT OF ANALYSIS

For: (16742) LINCOLNLAND AGRI-ENERGY LLC
DDG
DISTILLER DRIED GRAIN

ICP Analysis feeds AOAC 985.01 (mod)

Analysis follows MWL ME PROC 29 which is based on AOAC 985.01. Samples have been prepared using MWL ME PROC 69 which is a wet ash procedure that requires mineral acids and heat. Sample analysis involves moving the sample extract into the ICP where it is nebulized and introduced into the high temperature plasma which energizes the electrons of the dissolved minerals/metals. As the energized electrons of the minerals/metals return to ground state, energy is released as light. The emitted wavelength(s) and light intensities are used to identify and quantitate the minerals/metals in the sample

The result(s) issued on this report only reflect the analysis of the sample(s) submitted.
