

# AXILO<sup>®</sup> BMZ

## 100% EDTA-Chelated, Dry Granular Micronutrients for Superior Performance with Glyphosate!

When you add micronutrients to glyphosate for application to Roundup Ready<sup>®</sup> corn or soybeans, don't sabotage your crop by applying "off-label or offspec" nutrients.

AXILO BMZ, sold exclusively by Helena, is a combination of Boron, Manganese, Molybdenum and Zinc in a formulation that meets Monsanto's tank-mix requirements.

These micronutrients are often needed because glyphosate impacts soil microbes that help make them available to plant roots. Without these

sufficient nutrients, yield potential can be reduced.

AXILO BMZ is a water soluble microgranule that is 100% EDTA-chelated for efficient plant uptake and easier tank mixing. It's more efficient than liquid EDTA blends. AXILO BMZ gets the same results with 50-60% of the equivalent weight of most micronutrients. It also helps reduce chemical "tie-up" in tank mixes.

It can be used in low-volume ground or aerial applications, and it features excellent uptake when applied in-furrow or

### Nutrient Functions:

#### **Boron**

- Meristematic growth
- Carbohydrate metabolism
- Synthesis of nucleic acids
- Pollen, germination

#### **Manganese**

- Activation of many different enzyme processes
- Involved in nitrate reduction
- Necessary for photosynthesis
- Protein synthesis

#### **Molybdenum**

- Necessary for nitrate metabolism
- Necessary for chlorophyll
- Involved in iron & phosphate metabolism

#### **Zinc**

- Synthesis of auxins & protein
- Needed for uniform maturity
- Important in calcium translocation
