

BARRAGE[®] HF

With Burndown Herbicides, Leave Nothing to Chance.

Excellent Burndown Partner With Glyphosate.

New Barrage HF can give you faster and better broadleaf weed control—and good crop safety. And that makes it an excellent burndown partner with Roundup[®] and other glyphosate products.

It gives you the reliability and performance of 2,4-D LV ester, with improved and simplified spraying applications. That means you'll get better—and easier—broadleaf weed control.

Barrage HF has new technology that results in better deposition, penetration and absorption of the product on targeted weeds. And it gives you cost-effective and consistent results at lower rates than conventional LV ester products.

For details about Barrage HF, contact your dealer or Helena representative.

BARRAGE[®] HF

- Excellent burndown partner with glyphosate.
- Low volatile herbicide.
- Low use rates.
- Reduced need for additional spray adjuvants.
- Improved deposition.
- Improved compatibility with liquid fertilizers.
- Improved rainfastness.
- Increased absorption by plant tissue.
- Labeled for use in corn, sorghum, soybeans (7 day preplant), wheat, oats, barley, non-crop, turf, pasture and rangeland.
- Reduced flash point and combustibility.
