

# Protect Your **N-vestment!**

**Introducing N-Fixx, a nitrogen stabilizing fertilizer additive that protects your Urea or UAN investment.**

N-Fixx is a value-added, NBPT-based fertilizer additive that reduces volatility in Urea and UAN solutions.

It works by delaying hydrolysis caused by the urease enzyme, which reduces nitrogen volatilization by ammonia loss. This keeps nitrogen in the ammonium form for crops to use during key growth stages. The value-added component in N-Fixx enhances plant health and vitality.

N-Fixx can be used with granular Urea or UAN solutions in pre-plant, top-dress or other surface applications.

Don't let your nitrogen escape into thin air. Use N-Fixx and keep it in your soil to maximize yield potential.

- **Controls nitrogen loss**
- **Easy to use with Urea or UAN solutions**
- **Contains plant health improvement component**
- **Economical protection for your fertilizer investment**
- **Contains a blue dye to indicate complete & uniform coverage on Urea**
