

405 ALFALFA

- HIGH YIELDS
- EXCELLENT PERSISTENCE
- GREAT GRAZING TOLERANCE
- BROAD, SUNKEN CROWNS
- FALL DORMANCY: 4.0

- 405 will yield and persist in production areas where 4 cuttings are common and severe winters are likely. Growers will like the haying and grazing flexibility of 405.
- 405 survived 3 years of continuous grazing where it was abusively grazed at high rates. 405 has demonstrated grazing persistence superior to Alfa-graze. Its broad sunken crowns are set 1 inch below the soil surface. Increased root reserves allow 405 to withstand long duration, continuous grazing.
- Resistance to all the major alfalfa diseases helps this variety to produce top yields and withstand grazing over long rotations. 405 will persist and yield will stay high into stand life years 3,4 and 5. 405 offers growers the stand establishment and persistence advantages of seedling resistance to Phytophthora and Aphanomyces.
