

Surpass

Hybrid Sorghum Sudangrass Featuring bmr 6 Gene Technology

- A new value added BMR hybrid sorghum sudan grass which delivers highly digestible forage
- Surpass is a short structured plant with twice the number of leaves as a conventional sorghum sudangrass
- High leaf percentage allows easier harvest with a faster dry down
- Nonsenescent with tremendous green leaf retention extending the forage production period
- RFQ values comparable to alfalfa
- Provides energy and protein while improving animal health through a forage diet with readily digestible fiber
- 35-50% more leaf matter than comparative BMR hybrids
- 15-25% less lignin content than comparative BMR hybrids

Benefits of bmr-6 hybrids

- Low lignin levels makes Surpass a highly digestible forage and reduces the amount of additional feed needed to gain maximum animal performance.
- Reduced wastage, stalks are digestible and so animals will consume total plant matter

- Reduced phosphorous excretion
- Increased feed value in each bale reduces the number of bales needed giving you a savings in your haymaking costs.
- Recovery after cutting — Excellent
- Drought tolerance — Excellent
