

Depression Proof Your Farming Operation - BRT Ag and Turf was established in 2006 and we have always promoted soil health and nutrient dense crops. We continually strive to find soil conditioners and biological products to improve water infiltration, increase air within the soil profile and preserve soil biology. The last few years BRT has applied many acres of biochar and other carbon sources to help increase soil organic matter. By doing all of this we are Depression Proofing our farming operations. We are reducing the dependency of commercial fertilizer and enhancing the biological release of nutrients that are already in the soil. This system can handle most conditions. No matter if there is a drought or extreme wet conditions a healthy soil will help buffer these adverse conditions. BRT will be sponsoring meetings in December and January to help expand on these topics. Please keep checking our website to get the latest information on dates and locations of these meetings. So if you are interested in improving your soils, improving your bottom line, and growing nutrient dense crops call us or attend one of our upcoming meetings. Our website is brtagandturf.com and our office number is

877-623-7711.

A photograph of a red tractor with a tillage implement, likely a moldboard plow, working in a field. The tractor is moving from left to right, creating deep furrows in the dark soil. The background shows a bright sunset or sunrise with a golden glow over the horizon. The sky is a mix of orange, yellow, and grey.
