Johns distinguishes between those components of the Arabic facet of the Norman monarchy which were inherited from the Muslim rulers of Sicily, and those which were imported from the contemporary Muslim world after ca.1130. This is demonstrated by considering the architecture and decoration of the Norman palaces in and around Palermo, ceremonial and regalia, the structure and practices of the Norman fiscal administration, and the Arabic titles of the Norman kings. Submits that the Fatimid court of Egypt was the source for these imports, and that the Norman kings took as their model the external symbols of royal power of the caliphate while remaining ignorant of their intrinsic significance.

Roger publishes a previously unknown early 17th c. map of Alanya (archive of the conti de Lazara, Padua), connected with the attacks made on Anatolia by the Order of S. Stephen, 1585-1639. Concludes that the map is an accurate fine-copy or presentation copy, ca.1606-13, from the so-called cartografia stefaniana based on a carefully observed military sketch map, and that it allows reliable conclusions to be drawn concerning the early 17th c. fortifications of Alanya.

- SUMMARY: Proposes a reconstruction of the Hispano-Arab garden on the basis of evidence from contemporary texts collated with data yielded by excavation. Texts cited embrace a period spanning the 10th to the 14th cs. Although the design remained essentially unaltered (as to plan, soil levels, irrigation system) some evidence of development is present. Surviving botanical lists disclose the contents of the gardens. Symbolism governs certain aspects of garden design as well as the choice of plants; and both together deepen our understanding of the Islamic aesthetic. Discussion covers the Alcazaba of Malaga, various gardens at the Alhambra and Generalife in Granada, and excavations in the Alcazar of Seville
