Work Zone Strategies (WZS)

2-Day Grant Course

Description: This two-day course discusses non-typical design strategies available to work zone designers. It focuses on strategies specifically designed to improve work zone safety and mobility, such as work zone full closures, intelligent transportation systems applications, variable speed limited, impact analysis, and enforcement. The Federal Highway Administration (FHWA) Work Zone Safety and Mobility Final Rule is also discussed.

Intended audience: The course is intended for engineers and/or anyone responsible for planning and designing a traffic control plan (TCP).

Upon completion of this course, participants will be able to:
1) Discuss various strategies available to work zone designers
2) Provide guidance to help in selecting work zone strategies
3) Discuss strategies that can be incorporated into Transportation Management Plans (TMPs)
