Voucher (%)	56%	79%	77%	58%	75%	73%	65%
Direct Head Start (%)	-	-	-	-	-	-	16%**

*Share of two-year-olds under 300% FPL is calculated using different U.S. Census products for citywide estimates compared to zip code estimates used to create district-level data. For zip code estimates, we used the U.S. Census American Community Survey 5-Year Estimates by Zip Code Tabulation Areas (Table B17024) for children under 6 in households with incomes below 300% of the FPL and that share was applied to the two-year-old population across all NYC Zip codes to estimate the number of two-year-olds in households under 300% of the FPL. For more information, see Sources and Notes.

**While citywide numbers capture enrollment in Direct Head Start programs, more granular geographic disaggregation does not, because of source data constraints. Therefore, summary data for five districts capture enrollment in contracted seats and with child care vouchers only.

TABLE 4.

Citywide Increase in Voucher Utilization Across Age Groups

Age group	2022	2025*	Change (#)	Change (%)
Under 2	4,004	14,171	10,167	253.9%
2-year-old	4,195	13,215	9,020	215.0%

4-year-old	5,058	9,502	4,444	87.9%
Children under 5	23,083	55,258	32,175	139.4%
School-age	22,959	40,928	17,969	78.3%
Total	**96,186**	**46,042**	**50,144**	**108.9%**

*Voucher enrollment numbers for 2025 are slightly different from what CCC recently published in the 2026 edition of the Keeping Track of New York City's Children data book (Figure 5.21), primarily due to additional data cleaning and exclusion of providers outside the boundaries of New York City. Additionally, percent change is different because here we are comparing 2022 and 2025, while in the data book we compare 2023 and 2025.

Child Poverty by NYC Zip Codes

Source: U.S. Census Bureau. (2024). American Community Survey 5-Year Estimates by ZIP Code Tabulation Areas or ZCTAs. Child Poverty (Table S1701). Children under 18 years in households with incomes below the Federal Poverty Level (FPL) or $33,000 for a family of four.

Reliability was assessed using the coefficient of variation (CV), calculated from the Census-published margin of error, using the reliability thresholds that Esri applies to ACS data. Estimates for 32 zip codes were suppressed because they were unreliable (CV > 40%)..
