

Zoom How-To *(Zoom prefers the Chrome browser)*

These instructions detail how to join a zoom event on a computer without downloading the app.

- 1) Go to the Zoom meeting via the URL/link provided. You'll land on a page like the first screen below.
- 2) Use the [click here](#) link to join the meeting online without downloading software.

Another link will populate below. Click [join from your browser](#) and to join the Zoom meeting.

Zoom can be a little cranky (or they just want you to download the software).

If you don't see the 2nd line with the [join from your browser](#) link, repeat the steps above.

If that doesn't work, click the [download & run Zoom](#) link.

That will pop-up a box to download the software. Cancel out of that.

Clicking around on these various links will eventually produce the [join from your browser](#) link :-)

Once you're in, click the blue button: [Join Audio by Computer](#)
