

Your Partnership Is Taking the Mission to Brazil

This week, your partnership with JAARS is helping send Glen Adams, Nehemiah Diedrich and team to Brazil to provide Water Travel Safety Training for missionaries serving in remote areas.

For many missionaries, rivers are the only way to reach the communities where they serve. Through your financial support, you are helping JAARS equip these missionaries with the skills they need to travel those waterways safely and continue their work of bringing God's Word to people in places where roads don't reach.

Training That Will Keep Going

The first week of training, September 28–October 3, Glen Adams and Nehemiah Diedrich are equipping four “trainees” to become Water Travel Safety instructors themselves. After completing their training, they will help lead the next training for missionaries at ALEM's (JAARS Bible Translation Missionary Partner) remote jungle camp October 10–14.

This is an exciting step because the training will continue long after this trip. As these new instructors gain experience, they will be able to lead future training with less reliance on staff from the JAARS Base. This multiplication will allow JAARS to help equip even more missionaries throughout South America and beyond.

A Challenging Journey

Reaching the training site requires several flights, a full day of bus travel, and an 8–10 hour boat journey down the Xingu River. The river is especially challenging this year because water levels are very low, exposing submerged rocks along the route.

The journey is part of the mission—and you are part of it, too.

Thank you, Messiah Lutheran Church of Wilmington, for helping make ministry like this possible through your faithful support of JAARS. Would you join us in praying for Glen, Nehemiah, their students, and the entire team?

SAFE TRAVEL-For protection on the flights, bus journey, and river travel, especially as they navigate the low waters of the Xingu River.

SAFE BOAT TRAVEL-For skilled boat operators and protection from submerged rocks and other hazards along the river.

EFFECTIVE TRAINING-That the instructors and students would learn well, connect with one another, and work together effectively.

GOOD HEALTH-For protection from malaria, parasites, giardia, and other illnesses common in the jungle.

MULTIPLICATION-That these four new instructors would be well equipped to lead future training and help more missionaries serve safely in remote places.
