Audio Training

Seminars, online videos, podcasts, and forums are great. But when you are back in your sanctuary with your gear and your techs…have you ever felt stuck? Well, finally there's help for your Audio Team! We are so excited to share a training course for audio techs that brings us to your church! You can invite as many of your team as you'd like and even people who aren't serving yet, but are interested. Here's what it'll look like:

Group Training #1
- A 3-hour training session at your church where you'll learn the basics of signal flow, gain staging, equalization, and the heart of the sound tech's job.
- Resolution of some of your current issues so you'll get some "quick wins."

Group Training #2
- A second 3-hour training session at your church where you'll learn Best Practices of monitoring, mics, mixing, troubleshooting, etc. Of course, there'll be time for Q&A throughout the trainings.

Individual Training
- Audio Techs will receive individual training sessions during a weekly rehearsal, where you'll have the chance to ask very specific questions and receive real mentoring where each tech needs it most.

This is at *your* church with *your* equipment and *your* band!

Fees
$1350* includes 6 training sessions: 2 group trainings and 4 individual trainings. You can add more individual training for $175* each. If you just want to try it out, you can start with a single group training for $325*.

*If the church is more than 45 minutes away from Lancaster, PA, the standard IRS mileage rate is charged. This is usually about $100 per hour of travel. (if you're out of state, let's talk!)

Six?! Why so many training sessions?
The art and science of running sound takes time to learn and to internalize. The cumulative effect of multiple training sessions will provide the best *long-term results* for your church.

O p t i o n a l   s e r v i c e s

3-year plan ($325*)
- We'll sit down with your Technical Director, Worship Leader, and Pastor to begin creating a 3-year plan for you, so you know what to budget for and how to spend that budget. So if you only have $X to spend this year on improvements, you'll know exactly what will give your church the most return for your investment, what to buy first, second, third, etc. If you do need to purchase any equipment, we have recommendations of quality companies that will treat your fairly. We don't make money on any purchases you make, we just trust and like them.

Sunday Observation ($325* per coach)
- Sometimes it's helpful to have a professional tech at your Sunday morning service to observe the dynamics or even run the system "in real time." (when "the only time that crazy bug in the system decides to scuttle out of its dark corner!") You can also have a Worship Coach come too so he/she can focus on the band (and how that affects the sound).

Audio System Tuning ($325-650*)
- A System Tuning to help you start from solid ground. When you equalize the system (before using EQ to adjust individual channels), you reduce the chance of feedback, annoying hum, and painful frequencies. Simple systems with analog EQ's are $325, complex systems with DSP's are $650.
