

Technology In Action

As a part of an outstanding hands-on education at Calvary Christian School, we utilize areas of technology to add spark to learning. We recognize that all students learn differently, created by God with varying gifts and talents and learning styles. Technology is a tool that gives another layer of learning, to help students to both glean information and use higher level thinking.

Calvary Christian School has had interactive whiteboards for close to 2 decades, and we are in the process of upgrading each classroom with a new SMARTboard with a state of the art multimedia experience. Each classroom, Grades K-8, are receiving this upgraded system. In addition, a variety of laptops, desktops, tablets, iPads are available within varying classrooms for regular usage by students.
