Forward

A community health assessment, also known as community health needs assessment, identifies key health needs and issues through systematic, comprehensive data collection and analysis. In today's world, data collection and analysis can be overwhelming. We have the ability to count, detect, measure and analyze just about anything. The data gathering could easily consume all of our efforts. The intentional pause taken to select the data that matters most to the health of our community, health of our residents, and place it into an understandable context has resulted in this 2023 Fulton County Community Health Assessment.

The source of the quantitative data contained in this report includes the Ohio Department of Health and relevant national, state and local data sources. In the Listening Session pages, you will find quotes and qualitative data collected from three sub populations identified as being particularly impacted by access to health services: parents of children age 0-11, Hispanic and Latino residents and our older population 65 years and above.

The 2023 Fulton County Community Health Assessment is the result of ongoing collaborative efforts that span more than 20 years and comprise a number of community leaders and organizations known collectively as the Fulton County Partners for Health. Previous collaborative efforts have most recently produced the 2021 Fulton County Youth Health Status Report. The results of the Youth Assessment (survey) completed in the fall of 2021 can be found in the 2021 document. Collaborative efforts in 2019 resulted in the 2020 Fulton County Community Health Assessment. The results of the Adult Health Assessment (survey) completed in 2019 are contained in the 2020 document.

Both of these documents are valuable reference documents and are complemented by the updates and additional data of this 2023 Fulton County Community Health Assessment.

Unique to this report, when compared to earlier iterations, is data describing the impacts of the COVID-19 Pandemic. Of special interest is the qualitative data found in the listening session section where participants reflected on the positive as well as negative effects of the COVID-19 Pandemic.

The data in this report helps us to describe and understand the prevalence of acute and chronic health conditions, access to care barriers and health disparities. Use of this data to direct community resources to where they will have the biggest collective impact is the next step. Partners for Health will use this report to inform the development and implementation of the Community Health Improvement Plan, a strategic plan to focus improvement efforts on identified health priorities. We encourage you to be part of this ongoing effort to positively impact the health of this community. May you find purpose and satisfaction in the everyday decisions that move each of us toward a healthier future.

Sincerely,

Kimberly A. Cupp, RS, MPH

Definition of Community & Service Area Determination

Fulton County has 42,186 people, per the Census Bureau, and is comprised of many small rural communities and townships. Fulton County Partners for Health is a collaborative of multiple stakeholders, most of which provide services at the county level. For these reasons, the county was defined as the community.

Inclusion of Vulnerable Populations

Fulton County is a rural county with not a lot of diversity, as seen by our census bureau data later in this report. However, there are still subgroups that are vulnerable populations including children, elderly and the Latino/Hispanic population. Listening sessions were held with these specific populations. Four listening sessions were held; a virtual session for parents, two in-person sessions for aging adults, and one in-person session held in Spanish for the Hispanic/Latino population. Data for these vulnerable populations can be seen throughout the report to help identify disparities.

Quantitative & Qualitative Data Analysis

Staff from FCHC and FCHD was able to collect both quantitative and qualitative data from multiple sources to include in the CHA. Secondary data was analyzed from local, state, and national data bases. Youth primary data was collected from students in the seven school districts. Hospital discharge and utilization data was included. In addition, listening sessions were held in summer, 2022 with vulnerable populations in the community. Collectively, the data will help the Fulton County Partners for Health better assess the needs in the county.

Process & Methods for Engaging Community

This community health needs assessment process was commissioned by the Fulton County Partners for Health. This coalition has been in existence for 2012 with approximately 20 organizations. Multiple sectors, including the general public, were asked through email listservs, social media, and public notices to participate in the process which included defining the scope of the project, reviewing initial data, planning a community release, and identifying and prioritizing needs.

State of Ohio Mandate

The state of Ohio mandated by law (ORC 3701.981) that all hospitals must collaborate with their local health departments on community health assessments (CHA) and community health improvement plans (CHIP). In addition, local hospitals and health departments must align with the Ohio State Health Assessment (SHA), requiring alignment of the CHA process timeline and indicators. This local alignment must take place by October 2023. Fulton County Health Center (FCHC) collaborated with the Fulton County Health Department (FCHD), the Four County ADAMhs Board and other partners to create the 2022 Fulton County CHA. Partners will also be participating in the upcoming CHIP, which will align partners to be in compliance by 2023.

Internal Revenue Services (IRS) Requirements

The Affordable Care Act (ACA), enacted in March 2010, added new Section 501 (r) requirements in Part V, Section B, on 501 (c)(3) organizations that operate one or more hospital facilities. Each 501 (c)(3) hospital organization must conduct a community health needs assessment and adopt an implementation strategy at least once every three years. This report meets these IRS requirements, and aligns well with the state mandate above.

Public Health Accreditation Board (PHAB)

National public health accreditation status through the Public Health Accreditation Board (PHAB) requires community health assessments (CHAs) to be completed at least every five years. The purpose of the community health assessment is to learn the health of the population, identify areas for health improvement, discover contributing factors that impact health outcomes, and identify community assets and resources that can be mobilized to improve population health.

PHAB standards highly recommend that national models of methodology are utilized in compiling the CHA. The 2022 CHA was completed using the National Association of County and City Health Officials (NACCHO) Mobilizing Action through Partnerships and Planning (MAPP) process. MAPP is a community-driven planning process for improving community health.

The Essential Public Health Services and Core Functions Source: Core Public Health Functions Steering Committee, Fall 1994

Priorities

The current Fulton County Community Health Improvement Plan (CHIP) covers 2020-2023. The National Association of County and City Health Officials (NACCHO) strategic planning framework, Mobilizing for Action through Planning and Partnerships (MAPP) was used throughout the process.

The following priority areas are aligned with the Ohio State Health Improvement Plan ((SHIP) and are being addressed at the local level:

Mental Health & Addiction

- To work toward improving mental health and decreasing addiction, nine strategies are being implemented which include screenings, trainings, media campaigns, education, and programming.
- Strategies are specifically focused on mental health, suicide prevention, and tobacco cessation.

Chronic Disease

- To work toward decreasing chronic disease, ten strategies are being implemented which include screenings, programming, environmental strategies, and policies.
- Strategies are specifically focused on hypertension, diabetes prevention, obesity, physical activity, and healthy food.

Many of the strategies implemented are directly aligned with the Ohio SHIP. Whenever possible, strategies that were more likely to reduce disparities and inequities were identified.

Executive Summary

In August 2022, Fulton County Health Department staff conducted listening sessions with Fulton County residents.

Additional health information from specific populations was desired. The populations identified are some of the most vulnerable or have influence (in the case of parents) of those most vulnerable (young children). Possible participants for each listening session were identified and plans were developed to advertise the opportunity to be part of a listening session.

The populations identified for participation in listening sessions included: older adults, parents of children 0-11 years old, and Hispanic/Latino residents.

- Four listening sessions were conducted by Fulton County Health Department staff members in August 2022:
 - 2 for older adults
 - Parents of children 0-11
 - Hispanic/Latino adults
- Between 5 to 14 participants per session
- Potential participants were screened for the following factors:
 - Lived in Fulton County.
 - Identified with the respective populations of interest.
 - Were over the age of 18.

- The majority of the question topics were the same as the previous listening sessions that were conducted in 2019.
- COVID-19 and the impact on families in Fulton County was added to the topics.

Senior Citizens

"We need volunteers...that's what I was saying, a volunteer base...I think there's a lot in our community that just isn't tapped into and there's probably a lot of good people in our community that want to help -and want to do it cause it makes them feel good"

Demographics

According to the 2020 American Community Survey 5 year estimates, 18% of Fulton County adults were 65 years old or older.

There were two listening sessions focused on older adults 65 and older held at the Fulton County Museum and Welcome Center in Wauseon and at the Swanton satellite of the Senior Center. There were 7 participants at the Wauseon session and 13 participants at the Swanton session.

Priorities

- Obesity
 - 83% of Fulton County adults 65 and older were overweight (51%) or obese (32%).
- Diabetes
 - 21% of older Fulton County adults were diagnosed with diabetes*
- Drugs and alcohol use
- Long hauler COVID
- Over-reliance on social media for facts

Concerns

- Personal safety when living alone
- Affordable and accessible mental health care and fitness opportunities
- Knowledge /awareness of services available
- Conditions and staffing levels at long-term care facilities

Needed Resources

- Assistance for household products (detergent, soap, toilet paper, etc.)
- Provision of documents with large font
- Volunteer base

Parents of Children 0-11 Years Old

"I personally feel like affordable health care and medications is a really big issue that's not really very well addressed."

Demographics

According to the 2020 American Community Survey 5 year estimates, 19% of Fulton County residents were youth 14 years old or younger. Approximately 10% of Fulton County and 17% of Ohio children were living in poverty (Source: 2020 Small Area Income and Poverty Estimates as compiled by 2022 County Health Rankings).

There were 5 participants in the virtual listening session.

Concerns

- Concerns from previous listening sessions were not the same as the parents of children 0-11 years old. Many of their concerns involved basic needs, such as food, income, child care or medical care costs.
- Participants mentioned that they were not aware of community resources that were available.

Needed Resources

- Participants mentioned having to make choices, such as choosing between medications due to costs
- Child birthing/newborn care/parenting class would be a great support for new mothers, but is cost prohibitive.
- Food pantries are not available without income eligibility for those with short-term financial need.
- Affordable childcare
 - The average Fulton County household with 2 children spent 21% of its income on childcare (Source: 2020 & 2021 Living Wage Calculator and Small Area Income and Poverty Estimates as compiled by 2022 County Health Rankings).
- Transportation

Priorities

- Affordable healthcare and medications
- Knowledge of services available
- Access to affordable childcare
- Mental health support groups

"Unless you know the resources exist, they might as well not exist."

Hispanic/Latino

Demographics

According to the 2020 American Community Survey 5 year estimates, 9% of Fulton County residents were Hispanic or Latino.

There were 14 participants at the Hispanic/Latino listening session at First Christian Church in Wauseon.

Priorities

- Reduce drug and alcohol use
- Transportation
- Medical care for uninsured
 - About 9% of Fulton County Hispanic or Latino residents were uninsured
(Source: 2020 American Community Survey, 5 year estimates)
- Childcare

Concerns

- Lack of translators/interpreters
- Length of time to schedule a medical appointment (2-3 months)

Needed Resources

- Knowledge of what is available:
 - Transportation through Medicaid
 - Free Clinic
 - Bryan Community Health Center
 - English Classes

“Sometimes you find yourself with people who need help, but they don’t let you help.”

COVID-19

Demographics

- As of January 26, 2023, there were 12,346 cases of COVID-19 reported in Fulton County during the pandemic.
- There were 118 Fulton County resident deaths in 2021 attributed to COVID-19, accounting for 22% of all deaths (Source: Ohio Department of Health, COVID-10 Data Extract).

Positives of COVID-19

Senior Citizens

- Everyone is better at washing their hands and disinfecting
- By not going out, we saved money
- Wrote and cleaned more, had deeper communication, became more resourceful

Parents of Children 0-11

- Access to items virtually that didn't exist prior to COVID
- Workplaces honor when a person is sick, and more employers recognized the need for sick time
- Fact checked information seen on Facebook

Hispanic/Latino

- No positives were identified by the Hispanic and Latino population.

Negatives of COVID-19

Senior Citizens

- COVID-19 made it lonelier, especially for a single person
- We became more cautious of the places we go, and avoiding large indoor crowds
- Loss of lives and loved ones

Parents of Children 0-11

- There's also a negative to working from home because some need to work, even when sick
- Many children fell behind due to digital homeschool. There were fears of additional surges causing closures or need to go virtual.
- Difficult to find childcare

Hispanic/Latino Adults

- Isolation
- Loss of lives and loved ones
- Loss of jobs, difficult to find other work

"I think we have more family reliance on each other, which I think actually helped a lot of the younger families. Instead of having to go to McDonalds every day or something like that, it was more, 'We are home. Let's hunker down as a family.' For some people, I think it really was nice to surround yourself with family and those you love and protect the people that you're with."

Leading Causes of Death in 2021

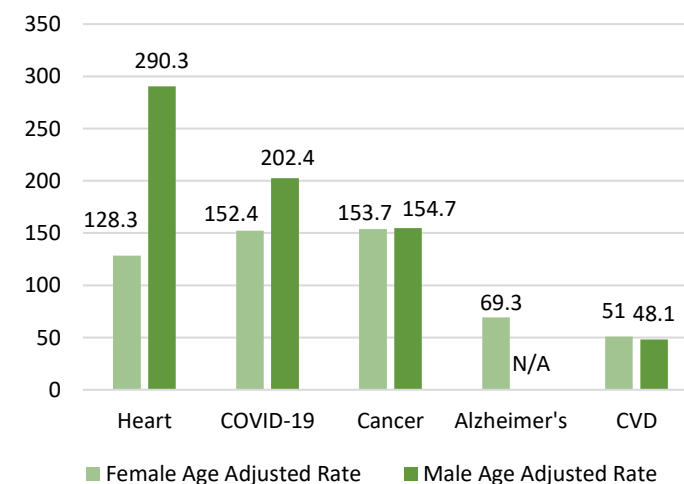

Leading Causes of Death among Fulton County residents have changed fairly significantly since the last report.

- The 2019 CHA reported Heart Disease (29% of all deaths), Cancer (22%), Chronic Lower Respiratory Diseases (7%), Accidents/unintentional injuries (5%), and stroke (5%) as the top 5 leading causes of death (*Source: CDC Wonder, 2014*).
- The Ohio Public Health Information Warehouse reported the 2021 Leading Causes of Death for Fulton County were:
 - Heart Disease (21%)
 - COVID-19 (19%)
 - Malignant Neoplasms/Cancer (17%)
 - Alzheimer's Disease (6%)
 - Cerebrovascular Diseases/Stroke (5%)
- Leading causes of death were different by gender.
- The Leading causes of death for males were: Heart Disease (26%), COVID-19 (20%), Malignant Neoplasms/Cancer (15%), Cerebrovascular Diseases/Stroke (4%), and Alzheimer's Disease (2%).
- The leading causes for females were: Malignant Neoplasms/Cancer (18%), Covid-19 (17%), Heart Disease (17%), Alzheimer's Disease (10%), and Cerebrovascular Diseases/Stroke (7%).
- Two percent (2%) of deaths were caused by diabetes.

Blood Pressure

The following data is from the 2019 Fulton County Community Health Assessment:

- One-third (33%) of adults had been diagnosed with high blood pressure (2017 BRFSS reported 37% for Ohio and 2016 BRFSS reported 34% for the U.S.).
 - 39% of men had been diagnosed with high blood pressure
 - 29% of women were diagnosed with high blood pressure
- Three percent (3%) of adults were told they were pre-hypertensive/borderline high.
- Eighty-three percent (83%) of adults with high blood pressure were taking medication for their high blood pressure.
- Fulton County adults diagnosed with high blood pressure were more likely to have:
 - Rated their overall health as fair or poor (61%)
 - Been ages 65 years or older (60%)
 - Incomes less than \$25,000 (58%)
 - Been classified as obese by body mass index (42%)

Quality of Life

- In 2022, 19% of adults reported having poor or fair health.
- The average poor physical and mental health days reported by Fulton County adults has increased over the last three years.

	Fulton County 2020	Fulton County 2021	Fulton County 2022	Ohio 2022
Poor or fair health	15%	19%	19%	18%

COVID-19 Pandemic

The COVID-19 pandemic reached the United States in January 2020. The first case was confirmed in Ohio on March 9, 2020. The first case was confirmed in Fulton County on March 26, 2020. The Ohio State of Emergency was declared on March 9, 2020 and a Stay at Home Order went into effect statewide on March 23, 2020. The Ohio State of Emergency was rescinded on June 18, 2021.

This report comes approximately three years after the COVID-19 pandemic started. COVID-19 rose quickly as the fifth leading cause of deaths occurring in Fulton County in 2020, fourth in 2021 and dropping to eighth in 2022 as determined by the physician completing the death certificate. COVID-19 has affected the social, mental, physical, economic and behavioral health of our residents. We are challenged to acknowledge the effects and work together to apply lessons learned and support our residents and communities to be.
