What is the Instant Church Directory Member App and who can access it?

This is a free app that allows your members to sync your church's directory to their iPhone, iPad, iPad Mini, Android device or Kindle Fire. Members will be able to view the church and staff information, as well as search and view family members. Members will also be able to call, email or text if a phone number or email address is available on the church, staff or family details. Any changes that are generated on Instant Church Directory Online will automatically download to each member's devices, ensuring they always have the latest information.

Who can access the app?

Anyone who has an email address listed in the directory (under their family details) will be able to request access to download and sync the directory on their device. Each member will receive a password per device, which cannot be shared with other members. Any member that is set to Inactive will not be able to procure a password. If a member has the directory on their device, and is later set to Inactive, they will no longer be able to sync and access the directory until they are set back to Active. Furthermore, all of the data is protected by SSL so only you and your members will have access to your church data.

Anyone who is in the directory has access to the information in the profile. Individuals cannot “authorize” certain people to access their information. ***A good thing to remember is that this is the same information that we would publish in print form to everyone in the good ol' days before technology!***

Every time the application is launched it will sync with any information that has been updated online.
