

easyTithe Security

Put simply, we take security very seriously. As a PCI Certified solution, we have gone above and beyond to protect your data.

PCI DSS Compliance & Security

As required by the [PCI Security Council](#) and all processing banks, EasyTithe is a Level 1 Certified PCI Compliant Service Provider. This means EasyTithe conforms to the highest set of security standards in the payment card industry. Your account managers, end users, and EasyTithe employees will never have access to the type of sensitive information that might lead to an unauthorized transaction.

SSL Transaction Security

EasyTithe uses 256 Bit SSL technology for data transactions. All personal, credit card, & bank information is submitted using 256 bit encryption. There is no stronger form of protection than this encryption and by doing this, we eliminate the possibility that someone might "tap" the line and extract your personal data from it. 256-bit SSL encryption has never been broken and according to RSL Labs, it would take a "trillion-trillion years" to crack the code using today's technology.

The Datacenter

Our datacenter upholds security measures to rigorous standards. Proximity card entry, camera-recorded server room access, and a perimeter security system all protect the datacenter facilities. These security components ensure only employed certified Server Engineers have direct access to the datacenter and individual servers. This restricted access ensures maximum security when maintaining, upgrading, and troubleshooting servers in the racks.
