

# TRM-422 & SDL-620

October 2019

Netvia Group is pleased to announce we have completed installation and training on our NEW TRM-422 Four Spindle Router and NEW SDL-620 Six Spindle Drill system for PCB manufacturing. Both of these machines are equipped with CCD cameras, Laser Tool Check and Real Time Broken Bit Detection. The TRM-422 includes Four 60K Spindles and the SDL-620 includes Six 200K Spindles. This NEW equipment optimizes Netvia Group's processing and production capabilities, which puts our customers in a position to keep up with the increasing demands of the electronics industry.

With this addition to our printed circuit board fabrication, Netvia Group continues to prove its commitment to continuous improvement in quality and process. This is just the latest example of how Netvia Group continues to invest profits for the future and in order to provide the market-leading technological capability and rapid turn around time that our customers demand.
