

Sandbridge Tattoo Aftercare:

- Take off wrapping and wash the tattoo after 2-3 hours.
- Wash the tattoo with liquid soap (preferably antibacterial)
- Pat dry and wait 10 minutes then pat dry again with paper towel to remove plasma.
- Apply a SMALL amount of ointment.
- After 10 minutes pat dry again.
- Do this wash/dry process 2-3 times a day everyday until healed. It is normal for your tattoo to "peel" like a sunburn after 7-10 days.
- Do not pick. Allow it to come off on its own.
- Normal healing time is about 2 weeks.
- NO submerging in water until it is healed. Showers only.
- NO pets near the new tattoo until healed.
- NO direct sunlight (natural or artificial) until healed.
- NO picking.

Be kind to your tattoo and your tattoo will be kind to you.
